

I'm not a robot

If youre looking for a complete guide to the SMOK Novo Kit, weve created yet another incredible, highly detailed guide. When it comes to solid, ultra-portable, compact pod system designs, it doesnt get much better than the SMOK Novo. Its a lightweight masterpiece from an international powerhouse that punches way above its grade. The Novo from SMOK delivers perfection with every hit and looks good doing it. Lets take a quick look at the device, whats inside, how it all works and figure out why this is one of the fastest-selling pod systems currently on the market. When it comes to pumping out killer kits and epic all-in-one systems, SMOK has had the market tied up for years. As a company, Shenzhen IVPS Technology Corporation Ltd has dwarfed its competition: over the last few years, putting out more different products than everyone else combined. From 200-watt box mods down to sleek pod systems, SMOK has something for everyone. Always making sure that every design is available in a plethora of colors, SMOK focuses as much on design as function. In a lot of ways, the innovation from SMOK has been pushing the industry forward. The Novo 4 has just recently launched, and thanks to the Novo 4 coils, youll see a great deal of improvement when it comes to the performance of the device.The Novo is one of the best products engineered by SMOK in the last six months, period. Not because it pushes boundaries or creates a new category but because they nailed the concept they were going for. A sleek design that is simple to use, easy to fill and doesnt require a massive user manual, its a step up from the average pod system. With its compact, low-profile design, the SMOK Novo is an ideal stealth vape. Its internal 450mAh battery makes it simple to use; you dont need to buy additional power sources or external chargers, its as simple as plug n play with a USB port. Pushing consistently between 10 and 16 watts makes it one of the most powerful air driven devices on the market.From a design perspective, the cobra plated panels make it stand out from the crowd while its comfortable, curved, ergonomic design makes it feel like an extension of your personality. For a device designed around salt nicotine use, it makes you feel as though other products are inferior. A plus point of the 1.5 ZML refillable pod is the fact that you tend to get a decent amount of run time for each one between fills and replacement (and the fact that 2 come in the pack is a definite bonus).Contents of the SMOK Novo Kit 1x SMOK Novo Device 2x SMOK Novo Replacement Pods 1x User Manual 1x Micro- USB Charging Cable Operating Instructions for the SMOK Novo.Operating the Novo is extremely simple, as is the device maintenance. The whole point of the pod system is to keep vaping effortless.Charging the Novo Simply plug the enclosed MicroUSB charge cable into the Novo and either a USB wall adaptor or USB connector on your computer. It is very important never to plug it into an adaptor that pushes over 1.5 amps. Anything that is considered a fast charger can damage the 450mAh battery very quickly. You will know when the battery needs to be charged as the intelligent battery indicator in the Novo will give you a very clear prompt when it flashes 15 times, rapidly, it has dropped below 3.3 V and requires power. Important point: The Novo does include a vape while charging function (pass-through technology as it was previously known) so even while its plugged in, its usable.Filling the Novo Pod Before first installing the pod, look on the side and you will see a small rubber piece on the tank. Gently lift the rubber bung and fill with your choice of e-liquid. The juice hole is big enough to accommodate a small dropper (if you are still using e-liquid in a medicine styled bottle) or the plastic nozzle of any Chubby bottle. After filling the tank, make sure to firmly re-insert the rubber bung to prevent any leaking.Attaching/Detaching the Pod Simply take the Novo Pod in one hand and the SMOK Novo device in the other and marry the two. While there are no magnets or clips to hold anything in place, the design of the product will keep them firmly together. When its time to refill or replace the SMOK Novo Pod, hold the two components between your hands and gently pull them apart.Activating the Novo Place the Novo tip in your mouth and take advantage of the air driven system. All you have to do is inhale and the device will do all the work for you. During normal operation, the smart LED will show blue to let you know that the device is activated and working correctly for the duration of your hit. If you pull for more than 8 seconds, the Novo will go into protection mode and switch itself off.ConclusionNow that we have described the basic functions of the Novo from Smok, talked a little about the device and what makes it stand out from the pack, we hope to have covered any questions you may have. The SMOK Novo is a great little device, and whether you currently own one or are looking to get one in the near future, remember this guide is here- you may just need it again. In the world of vaping, one brand that stands out is Smok. With their innovative designs and commitment to quality, Smok has become a household name among vapers. The Smok Novo 4 is the latest addition to their line of Mouth to Lung (MTL) pod kits. In this in-depth review and user guide, we will explore the features, design, performance, and user experience of the Smok Novo 4. Whether you are a seasoned vaper or new to the vaping scene, this article will provide you with all the information you need to know about this popular device.A Brief Look at SmokBefore diving into the details of the Smok Novo 4, let's take a quick look at the brand behind it. Smok was founded in 2010 and has been a dominant player in the vape industry ever since. They have gained a reputation for producing high-quality devices, ranging from vape pens to mods, tanks, and pod mods.With a wide range of products catering to different vaping styles, Smok has something to offer for every vaper. However, it's important to note that Smok's focus is not on rebuildable devices like RDAs, RTAs, and RDTAs. The Evolution of the Smok Novo SeriesThe Smok Novo 4 is not the first device in the Novo series. It is the latest iteration of a line of successful pod kits. Let's take a moment to explore the predecessors of the Novo 4:Smok Novo: The original Novo was a game-changer in the world of pod systems. It set the bar high with its compact design and simplicity.Smok Novo 2: Building upon the success of the original, the Novo 2 introduced improvements such as increased battery capacity and improved airflow control.Smok Novo X: The Novo X took customization to the next level with adjustable power settings and an OLED screen.Smok Novo 4: The newest addition to the Novo series, the Novo 4 takes a departure from the simplicity of its predecessors and introduces adjustable airflow, wattage, and interchangeable coils.It's worth noting that Smok has a vast catalog of devices, with the Novo series being just a fraction of their offerings. From more advanced devices like the RPM4 to simpler options like the SLM, Smok caters to a wide range of vaping preferences.What Can We Expect from the Smok Novo 4?The Smok Novo 4 represents a departure from the principles of the Novo range. Unlike its predecessors, the Novo 4 offers adjustable airflow, adjustable wattage, and interchangeable coils. This opens up a world of possibilities for vapers who want more control over their vaping experience. The Novo 4 utilizes the LP1 coil range, which currently consists of three coils, all featuring a "3 silicone ring, leak-proof system." The pods have a capacity of 2ml and come in a transparent black color, with the option to purchase completely transparent pods separately. The Novo 4 is equipped with an 800mAh battery, a 0.74A USB-C charger, a small 0.49" screen, and a single button for operation. Inside the BoxWhen you purchase the Smok Novo 4, you can expect the following items in the box:1x Novo 4 Device1x Novo 4 Pod1x LP1 Meshed 0.8ohm coil (preinstalled)1x LP1 DC 0.8ohm coil1x USB-C Cable1x ManualIt's worth noting that the contents of the box may vary depending on the edition and region. For example, the EU kits come with two LP1 Meshed coils (none pre-installed) and no LP1 DC coil. Despite the variation in the kits, the e-liquid capacity remains consistent at 2ml.Specifications and FeaturesLet's take a closer look at the specifications and features of the Smok Novo 4:SpecificationsDescriptionSize93.5x17.7x26.5mmPower Output5-25W (0.5-4V)Battery800mAh (internal)Display0.49" OLED screenResistance Range0.4-3ohmE-liquid Capacity2mlChargingUSB Type C, 0.74A max charge ratePodsRefillable, replaceable coilCoilsLP1 coil range: 0.8ohm Meshed, 0.8ohm Dual Coil MTL, 1ohm Dual Coil MTLAdjustable AirflowYesFill PortSide fillThe Smok Novo 4 is designed to be compact and portable, measuring 93.5x17.7x26.5mm. With a power output range of 5-25W, it offers a versatile vaping experience. The 800mAh internal battery provides sufficient power to keep you vaping throughout the day, and the USB Type C charging allows for quick and convenient recharging.The Novo 4 features refillable pods with replaceable coils, offering flexibility and cost-effectiveness. The adjustable airflow ring allows you to customize your vaping experience to suit your preferences. With its side fill port, refilling the pods is a breeze.Design and Build QualityThe Smok Novo 4 boasts a sleek and compact design. It is available in a variety of vibrant colors, allowing you to choose one that suits your style. The device is primarily made of metal and plastic, providing durability and a lightweight feel.The rounded base shape of the Novo 4 is reminiscent of its predecessor, but the screen, button, and airflow adjustment have been redesigned. The charging port has also been relocated for convenience.The pods of the Novo 4 have a capacity of 2ml and feature a 1.2 coil. The mouthpiece is designed with user comfort in mind, fitting comfortably in the mouth and offering an enjoyable vaping experience. However, the opaque black plastic material of the mouthpiece makes it difficult to check the e-liquid level inside the pod.Unlike some other pod systems, the Novo 4 pods do not have a protective membrane covering the air hole on the bottom, which can result in condensation on the battery. Nonetheless, the Novo 4's design and build quality are commendable, providing vapers with a visually appealing and user-friendly device.Battery Life and PerformanceAccording to Smok, the Novo 4 is equipped with a 450mAh battery. However, some users have suggested that the true battery capacity may be slightly lower. Regardless, the Novo 4's battery life is on par with other similar devices in its category. To recharge the device, simply connect it to a power source using the included USB Type C cable.It's worth noting that the cable included in the box is quite short, limiting its use as a passthrough device. However, you can still vape while charging by using a longer USB cable. The Novo 4 features a small LED light that indicates the battery status, allowing you to easily monitor its charge level.In terms of performance, the Novo 4 offers a mixed experience. When fully charged, it delivers a satisfying hit with hotter vapor and increased vapor production compared to other pod systems. The power output ranges from 10W to 16W, depending on the battery charge.However, some users have found the draw on the Novo 4 to be inconsistent. It is designed to accommodate both mouth-to-lung (MTL) and direct lung (DL) vaping styles, but the draw may feel awkward for some users. MTL draws require a stronger inhale to activate the battery, while DL draws may not feel as airy as desired. Additionally, some users have reported a plastic or medicine-like taste when using the Novo 4, which can affect the overall vaping experience.About UPENDS GT and UPENDS MirrorUPENDS is a leading vape brand that offers a variety of innovative products, including the GT and Mirror. The GT is a pod mod that features a large 1000mAh battery and a maximum output of 50 watts. It is compatible with both freebase and salt nicotine e-liquids, and it comes with a variety of pre-filled pods that are available in a variety of flavors.The Mirror is a pod vape that is known for its sleek design and excellent flavor production. It has a 520mAh battery and uses refillable pods. The Mirror is also available in a variety of colors, so you can choose the one that best suits your style.Both the GT and Mirror are great pod vapes that offer excellent flavor production and long battery life. However, the GT is a more powerful device that is better suited for vapers who want more vapor production. The Mirror is a more portable device that is better suited for vapers who want a sleek and stylish device.Ultimately, the best pod vape for you will depend on your individual needs and preferences. If you are looking for a powerful device with a lot of vapor production, then the GT is a great option. If you are looking for a portable device with a sleek and stylish design, then the Mirror is a great option.ConclusionThe Smok Novo 4 offers a range of features and customization options that set it apart from its predecessors. With adjustable airflow, wattage, and interchangeable coils, it caters to vapers who seek more control over their vaping experience. The compact design, vibrant color options, and user-friendly interface make the Novo 4 an appealing device for vapers on the go.However, the inconsistent draw and potential flavor issues may deter some users from fully enjoying this device. Overall, the Novo 4 is a solid option for those who prioritize customization and portability in their vaping journey. This product is intended to be used with e-liquid products containing nicotine. Nicotine is an addictive chemical. Important Safety Information and WarningsYou have to make sure that your age is 21 or older, then you can browse this website further. Otherwise, please leave and close this page immediately!Posted by David on 12th Jan 2023 SMOKS Novo series has dazzled pod-based vape enthusiasts with some of the most exciting technology to date. With its generous 5-25 watt range, adjustable airflow and OLED display screen-based navigation system, its easily one of the most advanced pod systems on the market, yet its very easy to use, pocket-friendly and attractive to boot. Combining its powers with those of the SMOK LP1 Coil Series, vapers are in for absolutely stunning flavor, satisfying clouds and the ability to seamlessly switch between salt-based nicotine and freebase nicotine.Using the SMOK Novo 4: A TutorialOf course, if this is going to be our first time using the Novo 4, you might need a little bit of help setting it up and using it for the first time.Step #1: First, remove the contents of the Novo 4 from its box, leaving the user manual nearby in case you need to refer to it at any point.Step #2: Now, youll need to charge your Novo 4. Find the charging cable and plug it into the type-C charging port of your device, and plug it into a power source. Allow your device to reach a full charge by checking the battery life on the display screen.Step #3: While the device is charging, grab the Novo 4 pod and install the LP1 Coil (installed by simply pressing it into place). Then, fill it with vape juice, by locating the side fill port. Allow the pod to sit filled with vape juice for 5 minutes before vaping, to allow the coil to be totally primed.Step #4: Now, attach the pod to your freshly charged device (it attaches magnetically). Turn on the device and adjust your wattage using the display screen and navigation buttons. Final Step: At last, you can take a puff of vapor through the mouthpiece. The device is draw-activated, so theres no need to press any buttons. If desired, adjust the airflow switch to accommodate the type of e-liquid that youre vaping.As you can see, SMOKS Novo 4 800mAh Kit is an advanced and versatile vaping system that is perfect for beginners. But even so, you might need a little help getting started. Now that you know the steps involved, youll be well on your way to enjoying all that this awesome kit has to offer. No data found at the moment Skip to content The SMOK Novo 4 and Novo 4 Mini are popular devices from SMOK with similar appearances but slightly different features.The Novo 4 Mini has slightly smaller dimensions than the Novo 4. It also has no fire button or screen, since its a direct-draw device;whereas the Novo 4 has both.Both devices use USB-C fast charging. The Novo 4 can reach a full charge in under 90 minutes, while the Novo 4 mini can be charged in 45. Both devices also have inlet rings allowing you to adjust airflow for your vaping preferences. For best results, always prime new coils before use, use only the charger supplied with your device, and avoid overfilling your devices. SMOK has been in the vaping game for a long time, but they keep producing quality new devices ideal for both new and experienced users. Two of the latest devices from their popular Novo series are the Novo 4 and the Novo 4 Mini;confirm that this trend probably isnt going to change anytime soon. Vape enthusiasts, rejoice!The U Vape team has sold SMOK products for years, and we know all about the Novo seriesincluding the Novo 4 and Novo 4 Mini. Below, well give you the answers to your burning (vaping?) questions about purchasing, setting up, and using these pod systems.Buy Now: Each SMOK Novo 4 Device Kit includes:1 x SMOK Novo 4 Vape1 x 2mL Novo 4 Pods2 x 0.8ohm LP1 Mesh Coils1 x Type-C Cable1 x User Instruction Manual The Novo 4 Mini Device Kit comes with:1 x Novo 4 Mini Pod System1 x Novo 4 Mini Replacement Pod1 x LP1 Meshed 0.9ohm MTL Coil (Preinstalled)1 x LP1 Meshed 0.9ohm MTL Coil1 x Type-C Charging Cable1 x User Manual The Novo 4 Mini differs from the Novo 4 in the following ways:The Novo 4 Mini is smaller (91.6mm by 24.5mm by 16mm vs. 93.5mm by 26.5mm by 17.7mm for the Novo 4).The Novo 4 Mini has no button or screenit supports direct draw only, so it doesnt need these features.The Novo 4 Mini has a larger battery than the Novo 4 (900 mAh vs. 800 mAh in the Novo 4). The Novo 4 Mini and the Novo 4 both have several things in common:Both devices have air-inlet rings to help adjust airflow and customize your draw.Both the Novo 4 and Novo 4 Mini are compatible with SMOKS LP1 coil series.Both devices use leak proof seals and o-rings to keep your e-liquid in the pod where it belongs during use. The SMOK Novo 4 is available in:Blue Grey CobraCyan Pink CobraRed Stabilizing WoodBlack Stabilizing WoodBlack Carbon FiberSilver Carbon FiberFluid Black GreyFluid 7-ColorBlack ArmorWhite Armor The SMOK Novo 4 Mini can be purchased 10 colours across two different categories: Silver Black CobraSilver Red CobraRasta Green Cobra7-Color CobraWhite CobraBlack CobraFluid 7-ColorBlack Black GreyRed Stabilizing Wood Both the SMOK Novo 4 and Novo 4 Mini have USB-C charging capabilities, allowing them to reach a full charge relatively quickly. The Novo 4 can charge fully in 90 minutes, while the Novo 4 Mini can go from dead to full in just 45. You should never use a charger other than the one supplied with your device. The device you buy is designed to handle a specific amount of voltages; a charger that supplies the wrong amount runs the risk of causing damage to the battery.Both the SMOK Novo 4 and Novo 4 Mini can last throughout the day on a fully charged battery. To get the longest possible battery life from either device, we recommend vaping conservativelytaking a single draw for just a couple of seconds every other minute or so will let you enjoy your device longer before having to charge it back up again. The Novo 4 Mini is a direct draw device;which means it doesnt have controls that let you dial the wattage up or down, like you can on the Novo 4. However, since the Novo 4 Mini is compatible with all LP1 coils, you can adjust the wattage by using coils with different levels of resistance.Using coils with less resistance increases the flow of current while using the devicemaximum output for the Novo 4 Mini with compatible coils is 20W, while adjusting the coils and controls on the Novo 4 gives you a power output range of 525W.Both devices let you control airflow by means of an airflow inlet ring. Youll find this ring on the side of each device, just under the area where the pod goes.How Long Will the Coils in My Novo 4 or Novo 4 Mini Last?Both devices use SMOKS LP1 coils, which typically last for 12 weeks. You can increase the lifespan of your coils by cleaning them, avoiding highly sweet e-liquids in your pods, and following best practices when using your device (discussed below). The SMOK Novo 4 and Novo 4 Mini may have trouble hitting properly if:The sensor on the device is dirty. Try wiping the area underneath the pod with a clean cotton swab whenever you put a new pod in. Your battery is too low. Fully charge the device before firing to ensure a healthy flow of current and a satisfying draw. Both pod systems are designed with anti-leak technology, but misusing your device can make leaking more likely. Here are some best practices for keeping the e-juice in these devices where it belongs:Keep your device upright, as e-juice can leak out more easily when its lying on one side (if youre keeping it in a pocket or bag, close up the air holes before putting it away). Check the seals. Leaks can occur if your pod and coil arent installed all the way, so make sure to double-check before use. Your pod should click when you pop it fully into either device.Vape at higher wattage. Turning up the power on the Novo 4 or using a coil with less resistance in the Novo 4 Mini helps ensure that your e-liquid is vaporizing fully before it comes out of the mouthpiece. When using variable wattage devices like the Novo 4, do not attempt to exceed the maximum wattage for the coil youre using. You can ruin the flavour of your device or burn out the coils too fast by:Failing to prime the coils. Always wait 10-15 minutes after installing a new coil and filling up the pod before you use your device. This lets the e-liquid saturate the wick properly so the wick doesnt burn during use.Using sugary e-liquids. The sweeter your vape juice is, the more coil gunk it produces as a byproduct when it vaporizes. This residue builds up until it affects the taste of your device and can also impact the flow of current when you activate it.Drawing too long or too often in a short amount of time. Drawing for longer than a few seconds at a time or chain vaping (where you take a series of quick draws without letting the device cool down in between) can cause overheating and burn your coils out. Keep your draws short and give yourself at least 5 seconds between hits. \*\* total quantity \*\* | \*\* unit price \*\* / \*\* unit measure \*\*The SMOK Novo series started out as SMOKs simpler alternative to the more complicated Nord platform. While the Nord featured replaceable coils and had other advanced features like a wide range of adjustable power settings, the Novo was simpler and designed to be appropriate for complete beginners.Today, though, the SMOK Novo 4 defies the conventions of the past by offering features that were once only available in more advanced devices. That blurs the line between the Novo and Nord because the only real difference between the two products today is the level of power that they offer. With that in mind, its possible that youre looking at the Novo 4 and are wondering if its the right device for you.Is the SMOK Novo 4 still a great vape kit for beginners? Is it flexible enough to grow with you as you become a more experienced vaper, and your preferences change? Theres only one way to find out. Youre going to learn it all in this SMOK Novo 4 review and instruction manual.Whats the Price of the SMOK Novo 4?So, what can you expect to spend if you buy the SMOK Novo 4 today? Heres an overview of the prices associated with this device. SMOK Novo 4 Kit, \$24.99. The SMOK Novo 4 is available in 10 terrific colors, and it comes with a pod and two coils. Since the SMOK Novo 4 pod has a removable coil, you can continue using the same pod indefinitely.SMOK Novo 4 Coils: \$10.49 per five-pack. The SMOK Novo 4 works with both the DC MTL 0.8-ohm coil and the 0.8-ohm meshed coil from the SMOK LP1 coil series. We suggest adding at least one box of coils to your order when buying the Novo 4 because youll need to replace your coil every several days.Nicotine Salt Vape Juice: Nicotine salt e-liquid at VapeJuice.com starts at just \$6.99 per 30-ml bottle, although we occasionally offer sales that can help you save even more money.If youre new to vaping and need to buy e-liquid, that brings the total cost of the SMOK Novo 4 kit to about \$42.47 around the same cost as a few packs of cigarettes.What Makes the SMOK Novo 4 Special?So, what are the special selling points that make the SMOK Novo 4 stand out from other vaping devices? These are the key features of the SMOK Novo 4.It has replaceable coils, so you can enjoy the fresh new coil flavor whenever you like simply by installing a new coil instead of replacing the entire pod.It has fully adjustable airflow, enabling you to enjoy a tight mouth-to-lung vape or a restricted direct-to-lung hit if you want a bit more vapor.It has a control button that allows you to adjust the devices power level in 0.5-watt increments up to a maximum of 25 watts. The button also turns the Novo 4 on and off.Its 800 mAh battery charges in just 90 minutes via a built-in USB-C port.It uses a mesh coil for instant vapor production with no ramp-up time.The coils have three silicone gaskets to make leaking almost impossible.SMOK Novo 4 vs Novo 3, Novo 2 and Novo: How Do They Compare?Now that you have a better idea of what makes the SMOK Novo 4 stand out, its time to learn how it compares to the other devices in the Novo series because many of the older Novo devices are still being made. In fact, the SMOK Novo 4 isnt even the latest device SMOK has recently expanded the series with the release of the new SMOK Novo 5. So, how do the different devices compare? SMOK Novo: The original device in the SMOK Novo series has a 450 mAh battery, and the pods have built-in coils. The SMOK Novo has no display and uses an indicator light to show its status. SMOK Novo 2: The SMOK Novo 2 has an increased battery capacity of 800 mAh. For better vapor production, it also has an improved pod and a redesigned airflow channel.SMOK Novo 3: The SMOK Novo 3 comes with an upgraded pod that uses a 0.8-ohm mesh coil for better vapor production. SMOK Novo 4: The SMOK Novo 4 represents a major evolution for the Novo product line, adding replaceable coils, adjustable airflow and variable wattage control.SMOK Novo 5: The SMOK Novo 5 features an updated visual design, a redesigned pod, a higher maximum power range of 30 watts, a higher battery capacity of 900 mAh and both puff-based and button-based firing. However, the Novo 4 also takes a technological step back from the Novo 4 in that the pod has a non-replaceable coil.Is the SMOK Novo 4 a Good Pod System for Beginners?All SMOK Novo devices are great for beginners. Although the Novo 4 has a replaceable coil which does add somewhat to the complexity of using the device installing a new coil is a simple matter of pulling the old coil out of the device and pushing in a new one. Thats a small price to pay for the benefit of not needing to buy an entirely new pod every time your coil burns out. If youre new to vaping, we think youll be completely happy with the SMOK Novo 4.How to Use the SMOK Novo 4Although the SMOK Novo 4 includes a printed instruction manual, we think youll enjoy having an opportunity to get to know this device before it arrives. Thats why weve provided the best SMOK Novo 4 manual in the world right here on this page. Once youve read it, youre going to know everything you need to know about using this device before you even open the box.How to Charge the SMOK Novo 4To charge the SMOK Novo 4, connect it to your computer using the USB cable supplied with the device. The screen changes to show a battery icon along with an estimated charging time. When the screen reads 100%, the device is fully charged.How to Fill the SMOK Novo 4 PodTo fill the SMOK Novo 4 pod, pull the pod out of the device and look for the red or black rubber plug on the side. Open the plug with your fingernail to reveal the pods filling hole. Add e-liquid until the pod is almost full and close the plug tightly. If youre filling the Novo 4 pod for the first time or have just replaced the coil, dont vape until youve waited at least five minutes for the coils cotton wick to absorb the vape juice.How to Vape with the SMOK Novo 4Once youve charged the Novo 4 and filled the pod, youre ready to vape. If the devices display is dark, youll need to turn the Nord 4 on by pressing the power button five times. When you do this, the display will turn on. Vape by puffing on the pods mouthpiece. If you want to adjust the power level, press the power button twice to enter the adjustment mode. While in this mode, press the button to adjust the power in 0.5-watt increments.How to Replace the SMOK Novo 4 CoilWhen your SMOK Novo 4 begins to produce a burnt and unpleasant flavor, its time to install a new coil. To do this, remove the pod from the device after using all of the e-liquid in the pod. Youll see the base of the installed coil at the bottom of the pod. Pull the old coil out and push a new one in. Refill the pod and let it stand for several minutes before vaping.How to Fix Problems with the SMOK Novo 4The SMOK Novo platform has been tested by millions of users over the years, and the engineers at SMOK have refined the platform every step of the way so you may not experience a single problem the entire time you own the Novo 4. If you do encounter an issue, though, youll find help in this section of our instruction manual. Heres how to fix the most common problems with the SMOK Novo 4.SMOK Novo 4 Not HittingIf your SMOK Novo 4 isnt hitting when you puff on it, the fix is usually simple unless youre seeing a No Atomizer error. Scroll down for more information if thats the issue youve encountered. Follow these steps to fix a SMOK Novo 4 that isnt hitting.Give the battery a complete charge.Turn the device on by pressing the power button five times.Replace the coil.SMOK Novo 4 Not ChargingIf your SMOK Novo 4 doesnt light up when you connect it to your computer, the battery isnt charging. Fix the problem with these steps.Make sure the Novo 4 is connected to your computer and not to an external USB charger. Wall chargers are generally incompatible with vaping devices and may cause the battery in your Novo 4 to overheat.Replace the USB cable. USB cables break easily, so using a new one almost always resolves a vape battery charging issue.Clean your Novo 4s charging port with a toothpick.SMOK Novo 4 LeakingIf you remove the pod from your Novo 4 and see vape juice under it, the pod has leaked. A leak can become a serious problem if the e-liquid contaminates the interior of the device, so you should remove the vape juice immediately with a paper towel. Do these things to prevent your Novo 4 from leaking in the future.Make sure that the coil is pushed all the way into the pod.Dont puff too hard when you use the Novo 4. If you use too much air pressure, you could flood the coil assembly.Dont overfill the Novo 4 pod. If you add too much e-liquid, the pod may leak when you replace the silicone cover.SMOK Novo 4 Not Turning OnIs your SMOK Novo 4 not turning on when you press the power button five times? Try these things to fix it.Charge the battery fully.Check under the pod for a leak. If you find vape juice under the pod, dry the Novo 4 completely, replace the pod and try turning the device again. If the Novo 4 still doesnt turn on, place it in a plastic bag with a desiccant packet or dry rice for a few days and then try using the device again.SMOK Novo 4 No Atomizer ErrorDoes your SMOK Novo 4 display the error No Atomizer when you use it? Try these steps to fix the problem.Make sure that the coil is pushed all the way into the pod.Check under the pod for a leak. If you find vape juice under the pod, dry the device completely and try using it again. If it still doesnt work, try using desiccant or rice to dry the device.Install a new coil.Make sure that the coil youre using is compatible with the Novo 4. Although all SMOK LP1 coils will fit in the pod, the SMOK Novo 4 is designed to use the DC 0.8-ohm MTL coil or the 0.8-ohm meshed coil. Other coils in the LP1 series may not work.slogan safety age
