

The best-selling and most popular high-pressure cleaner is undoubtedly the K4 model. This can also be seen from the numerous buyer comments than the Kärcher K4. But, of course, it is not suitable for all tasks and requirements. The best model for you depends on how dirty the area to be cleaned is, how large the cleaning area is, what your budget is, how much space you have and, last but not least, how often you want to use the device. There is an optimal Kärcher high pressure cleaner for and where they stand compared to their other models. We tested all models ourselves; what is our personal opinion? Overall, the K4 Power Control (K4 Power Control review) is our top pick. It clearly has the best price-performance ratio of all Kärcher models. The device is of good quality and has enough power to clean all heavily soiled objects comfortably and reliably in an average household. Even the list price is relatively inexpensive. But with a little patience, you can buy it at very attractive deals quite frequently. If you have a small budget and only need the device very little and would rather clean lightly soiled objects, start with the inexpensive K2 Compact. If you have an unlimited budget and want to buy only the best, go for the K7 Premium model. This is the Rolls Royce and offers top quality, best ease of use. There are five different electric standard Kärcher K3 Kärcher K3 Kärcher K4 Kärcher K5 Kärcher K7 Every single model comes with a different range. There are the Premium versions, Power Control versions and, for the top models, the Premium Smart Control versions. These power washers are equipped with a reel for the pressure hose. This is the difference with the power control and smart control versions. There is an LED-Display on the trigger gun that allows you to comfortably monitor the different power settings (from soft to hard). It's basically the same as the power control version (LED-Display) except you can select the different power settings directly on the gun without bending over to adjust the water pressure. Additionally, you can connect the pressure washer to the Kärcher smartphone app and control it remotely via Bluetooth. It's only available on certain K5 and K7 models. These are the smaller and lighter models come with extra equipment for cleaning your home (Surface cleaner, stone and facade cleaner, detergent). All car and home models come with extra equipment for cleaning your car (Rotating washing brush, foam jet, car shampoo) and cleaning your car (Rotating washing brush, foam jet, car shampoo) and cleaning your home (Note cleaner, detergent). of their pressure washer range, for example, you can buy a Karcher K2 Full Control, or K4 Full control, and you can also get a Karcher K2 Compact. So what are the differences? The compact version is more compact, it is the same spec as the full control counterpart. So the engine is the same, in terms of accessories you get a lance, however, the compact version is more basic and doesn't have the visual settings of the full control version. The detergent bottle isn't built-in, you get a suction tube that you would have to place on the ground next to the pressure washer. The compact models are also cheaper than the ful control versions too, so if you don't think you will use the detergent bottle feature and don't need the full control lance, then you can save some money with the compact version which is also smaller and lighter too. Depending on which model you are looking at, they all have the same spec. For example, if you were looking at getting the K5 Pressure washer, there is no difference in performance whether you go for the home, premium or compact. They all have a 2100-watt motor, giving 145 bar pressure. They all come with an 8m hose and how it is from the outside. Their premium model has onboard storage for attachments and a place to store and hold the trigger gun. The premium model also has a hose reel on the back for the lengthy 8m high-pressure hose. With all this extra weight, the design is very robust. It has large wheels to make it easy to move; however, it is heavier and bulkier than the compact. The compact version is just that, more compact. There is no onboard storage or a hose reel built in. It is designed to make the main unit as small as possible while still packing the powerful punch inside. Although the compact is smaller, you still need to store the hose and attachments elsewhere. It is also lighter, making it easier to move and carry if needed. That depends on which model you want to buy. You can buy the cheapest entry-level model (K2 Compact) at a discount under GBP 100. While the expensive K7 Premium Smart Control usually costs more than GBP 600. The cheapest Kärcher models are the K2 and K3. These entry-level models typically cost between £100 and £250 (list price), depending on the features and accessories included. cheap pressure washers to buy for under GBP 100 Kärcher pressure washers are usually a little more expensive than the competition. But you can almost always find lucrative deals. It is not uncommon to find Kärcher models with a most important features: ModelMax. We found that, on average, 90% of all buyers were satisfied with their appliances. Conversely, this also means that every tenth buyer of a Kärcher high-pressure cleaner was dissatisfied. For some it was because the unit did not live up to expectations, for others because it soon broke down or lost water, the performance was too weak or was generally perceived as being of inferior quality. The K4 models scored best, with 95% of all buyers satisfied with all versions. Buyers were least satisfied with the K7 models. About 15% were disappointed. It is striking that the Premium Smart Control Home kits (K7 and K5) have relatively low satisfaction rates. (You can read more about why this is below). The supplied high-pressure hose is usually too short, especially for car cleaning. For tasks that don't take too long and don't have too much of a dirty area to be cleaned, the small models are usually Ok. The quality often leaves a lot to be desired, especially the many plastic parts are prone to needing repair. In addition, water often leaks out. However, these devices are inexpensive and entry-level models. A little more power and a little more comfortable than the K2, but considerably more expensive. Is the higher price justified? Who is this model suitable for? We answer these questions in our comprehensive K3 Power Control - full review. Kärcher K3 Power Control review. Kärcher K3 Power Control review. Kärcher K3 Power Control
review. improvement in performance, but also the much better build quality compared to K2 or K3. For certain tasks, such as cleaning tasks around the house can be done easily and comfortably. The K4 Full Control series is no longer manufactured (There are still unsold units that are offered in shops like amazon). For this reason, we have not posted a review of it. The successor model is called Power Control review. Most buyers' reviews in the large online shops complain about the pressure hose. Many state that it gets twisted quickly, and some are dissatisfied with the length. Some find the wheels too small, being useful only on tarmac. We have tested the K5 models ourselves and can confirm some of the complaints, but not all. For more information, read our Kärcher K5 reviews: For very heavy soiling, these devices are ideal and clean much faster and more thoroughly than the smaller models. The Smart control function (operation via app) is pointless and offers no additional benefits. Why should I control a high-pressure cleaner via an app? It's really only suitable for people who use the device a lot. For weekend warriors, the price/performance ratio is insufficient. As with the K5, not all buyers are satisfied with the reel; In the advertising it looks simpler than it actually is. The Compact model is the most popular one. The same cleaning performance, the same cleaning performance, the same hose, but fewer electronic bells and whistles, thus less prone to needing repair, somewhat lighter and, of course, cheaper. Karcher K7 Premium Full Control Home pressure washer review These are the manufacturer's recommendations and should only be taken as a guide. Of course, you can also tackle larger tasks with a smaller model, such as the K2 or K3, are prone to faults after prolonged use, as they have many plastic parts and are generally of a lower quality. Another problem is the length of the small models is too short for some tasks. If you are not sure, it is best to start with a small, inexpensive device and try it out for yourself to see whether it achieves your goal. If you are buying a pressure washer primarily for car washing and cleaning, then there are a few things to look at when purchasing. Basically, you can wash any car perfectly with any Kärcher electric pressure is not an advantage when washing a car. On the contrary, more than 130 bar can damage the paintwork or even leave dents. The crucial factor is comfort: Can I wash the whole car without dragging the device behind me all the time? The length of the pressure hose is important here. The longer, the better. For example, with a 4-metre hose, to clean a Volvo XC 60 (mid-size SUV) you will have to move the unit 2-3 times. How easy is it to use shampoo? There are 4 different ways to use shampoo? By Plug n Play, with a built-in tank, a detergent soction hose, or a foam nozzle (must be purchased separately). The Plug n Play system is certainly the most practical. Insert the detergent soction hose, or a foam nozzle (must be purchased separately). When you are done, take the bottles out again, no cleaning, no problems. The disadvantage: you have to buy the expensive Kärcher bottles, because only these fit on the unit. Units with a built-in detergent tank are not very big, but they are enough for foaming a medium-sized car. You don't have to buy the expensive Kärcher detergent here, a cheaper product is just as good. The disadvantage is that you have to rinse out the tank, which is a bit of extra work. Also quite handy is the foam nozzle FJ6 (fits on every model). Simply connect it to the pressure gun, fill the tank with shampoo and get started. You can set the level of the foam supply and the strength of the water jet. Of course, you can also use a cheaper models are equipped with a detergent suction hose. This is not recommended. You have to constantly make sure that the bottle doesn't fall over and the liquid doesn't spill out. This is especially troublesome if the device has to be moved. Here we recommend buying a foam nozzle, e.g., the FJ6. Can the model be equipped with additional equipment such as brushes, special nozzles, etc.? Depending on your model's delivery method, it makes sense to use helpful accessories to achieve better cleaning results or more comfort. The rotating wash brush WB 130 and the foam nozzle FJ6 are particularly helpful. The good news is that they fit all Kärcher models. Kärcher K4 Premium Power Control Car & Home Our No 1 Pickbuy on amazonFor people who want to wash their car regularly, we recommend the K4 Premium Power Control Car & Home. This model meets all the requirements of a good high-pressure cleaner for your car:Long pressure hoseHose reelSimple detergent system (Plug n Play)Helpful accessories like a rotating brush Kärcher K2 Compact Car & Home. their car from time to time, we recommend the K2 Compact Car and Home. The necessary equipment is included and the cleaning your patio and driveway are going to be a big part of the use of your pressure washer then power and water flow are key. Your driveway may not have ever been pressure washed before, it could be 10 years old, however running a pressure is important to bring up stubborn moss, dirt and stains. The higher water flow rate makes it quicker and easier to wash up and remove the dirt, more water is being pushed through every hour making it quicker to carry out the task overall. With all this in mind if you are looking for a pressure washer for this task then we recommend the upper end of the K3 and the K5 and the K5 is the more powerful mid-range option, this is a great model for patio and driveway pressure washing. It has 145 bar pressure and a water flow rate of 500l/h. This is ideal for the task and also comes with a patio cleaning attachment. The 450 Patio Cleaner attachment is a splash-free cleaner that helps to clean the wooden fences and also the rooftop without any effort. If you want maximum power and expect to be using your pressure washer most weeks then you may want to go for the top of the range model, the charter K7. This is a fanatics machine and certainly has all the power you need, it packs a punch with 160 bar pressure washer most weeks then you may want to go for the top of the range model, the charter K7. This is a fanatics machine and certainly has all the power you need, it packs a punch with 160 bar pressure washer most weeks then you may want to go for the top of the range model. task thrown at it and is certainly powerful enough to bring your block driveway up like new. If you wanted a pressure washer for cleaning my patio As you can easily see in our comparison table, the most powerful model is, of course, the K7. With 180 Bar, or 2600 PSI (pounds per square inch), it is capable of removing all kind of dirt around an average home much faster and more comfortably than with any other Kärcher Jet washer. How to set up a Kärcher models. Unwind the pressure hose First off, attach your garden hose from your water supply to the pressure washer Connect the trigger gun to the pressure washer to "ON" Pull the lever and start cleaning Here you will find some of the best-selling and most popular Kärcher accessories More Karcher Pressure washers! Mark Sharona is a craftsman with decades of experience. He has used many pressure washers and knows exactly what's important. \*Disclosure: This article may contain affiliate links, and at no additional cost, this site may earn a commission if you buy. View DetailsKarcher is a compact and versatile machine, offering tasks. View washers, it's time to narrow down your choices. Our buyer's guide gives you everything you need to know for selecting the right Karcher pressure washersWhy Do You Need a Pressure Washer?Start the selection process by identifying the tasks you do around the home that benefit from the assistance of a pressure washer. For instance, if you wash your car on the weekends, but don't have any other needs for a pressure washer, then go with the specialized K2 model designed for this purpose. However, if you think you could use a washer to clean out your gutters, spray down your walls, or degrease your driveway, you're going to need a powerful, multi-functional machine. If you're a homeowner, you could benefit from one of these multi-use models as well, but if you rent your place, you might not have to do that type of maintenance to your home. Write down a list of chores you do around the house that can benefit from the use of a pressure washer, and then cross-reference the tasks to the choices on this list to find the model that's right for you. Pressure Washers are versatile tools offering you plenty of tasks. Whether you're a contractor, landscaper, or homeowner, there's a pressure washing system from Karcher to suit your needs. One of the reasons why pressure washers offer so much multi-functional use is due to the full range of accessories available with Karcher pressure washing kits. Surface CleanersThis accessory helps you clean flat surfaces fast. The tip fits onto your pressure washer wand, providing consistent coverage and removal of dirt and debris from flat surfaces. The nozzle features an internal rotating bar that distributes the pressure evenly, and the round enclosure holds back any overspray from damaging surrounding objects like flowerbeds. Brushes The brush attachment for Karcher pressure washers operates on the same principle as the surface cleaner. The brush helps to drive away dirt and debris while the water cleans the surface. Brushes are an essential accessory for cleaning cars and boats, as well as patio furniture and trash bins. Choose a model with a rotating brush for the best performance. Best 4000 PSI Pressure Washer Reviews: Complete Buyer's guideWand Washer TipsA rotary turbo washing nozzle rotates the water stream at 0-degrees and 3,000-rpm, providing a pulsing action through the toughest grit and grime. The stream rotates so quickly as it exits the nozzle, that it appears as a standard cone stream to the user during operation. This accessory helps to remove hardened grease, grime, and oil marks from driveways, garage floors, and walls.Wands and LancesWhen selecting your machine, look at the wand. The "Vario" power-spray wand and the "Dirtblaster" wand both offer individual functionality, and some models come with both types attached.Look for a telescopic model if you need to clean gutters, as this feature helps you reach further during your cleaning. Best Deck Cleaner Reviews: Complete Buyer's GuideBroomsThe broom accessory for cleaning cars, boats, and tougher areas like floors and driveways. The broom operates by connecting to the pressure washer wand. The work cleaning larger flat surfaces, like shop floors. Some models come with rollers on the broom for smooth movement. Contractors will benefit the most from using this accessory, and there aren't many uses for it around the home. Foamer Wands and TipsMost Karcher models come with onboard detergent tanks. If you're washing down your car, boat, or a wall, and you want to create a rich foam that eats away debris and dirt from the surface you're cleaning, use a foamer. The foamer attaches to the tip of your power-wand, mixing the detergent with the
water stream. The Karcher K2 car cleaning kit includes a foamer that provides your car with a deep clean, keeping it in showroom condition. Perfect for cleaning deckingThe Difference Between Gas-Powered and Electric Pressure WashersIf you look at the top three models of Karcher pressure washers in this review, you'll notice there are two electric models and one gas-powered model. So, which one suits your needs? If you need a pressure washer for use around the home, then an electrical outlet. You also have the option of connecting it to an extension cord to improve the range of the machine. An electric model produces a powerful enough water stream to handle most jobs around the home, from cleaning your driveway to washing your car. However, if you're a contractor or a landscaper, you need a more power and portability from their pressure washer system. Gas-powered models have no electrical cord limiting your range, and they produce higher operating pressures for tougher jobs. Karcher Pressure Washer FAQsIn case you're still sitting on the fence with your purchase decision, check out this list of frequently asked questions. What does psi mean when referring to a pressure washer?PSI is a term that refers to the Pounds Per Square Inch produced by the water jet, leaving the nozzle of the spray wand. The higher the psi ratings in your machine. However, if you need a pressure washer for degreasing driveways of shop floors, or cleaning walls, then choose a pressure washer with a high psi rating. What tips suit which jobs with a pressure washer? When using your pressure washer, the type of tip you use alters the water jet produced by the wand. Follow this as a quick-reference guide for selecting the right tip for your application.0° - For the toughest cleaning jobs15° - For stripping paint and grease from surfaces25° - For flushing dirt from sidewalks and gutters40° - For cleaning large areas and vehiclesWill a pressure washer damage my car? There are specific nozzles that mitigate the pressure produced by the water stream. If you wash your car with the wrong nozzle attached to the pressure washer, it could damage your paint or dent your bodywork. Always work with the vehicle cleaning nozzles will clog when debris enters the system. You need to ensure you remove all clogs immediately to prevent over-pressurizing the machine. causing it to fail.Can I leave the washer on when not in use?Never leave your pressure washer running while not in use. When you don't pull the trigger, and the eventual failure of the pressure washer. Can I run hot water through the pressure washer? No, running hot water through the machine will damage the internal components. There are none of these machines in the Karcher makes the best premium-brand pressure washing equipment, and pressure washing equipment. hands down. There's a model on this list to suit any need for a pressure washer around the home. If you're still battling to narrow down your selection, you can rely on our top choices for guidance. Our top choices include models for professional and home use, as well as the best budget buy. One of these models is sure to find a place in your tool shed or on your contracting crew. 1,793 1.8K Reading time: 8 min Prefer to listen? Undoubtedly, the Karcher pressure washer is a great tool you can buy. You may have heard of this tool but are Kracher pressure washer is a great tool you can buy. You may have heard of this tool but are Kracher pressure washer is a great tool you can buy. can you trust them? Let's take a tour where everything about a Karcher pressure washer has been explained. And after reading this, you can make. Why? Because this brand has won over any brand in the cleaning procedure. Their premium electric power pressure is highly compatible with cleaning larger areas. You can even use them in some contract work as well. With the 2000-Psi pressure, this machine produces flow rates of 1.4 gallons per minute. The water-cooled motor that the device has last 5 times longer than usual engines, with no lack of performance throughout the years. Even on the stiffest surface, the machine cleans the dirt with ease. Almost every model of Karcher pressure washers are top-rated on Amazon. People like them, and they have a 4.5 rating out of 5. They are worth every penny of yours as they make your cleaning process easy and fast. These machines sold for over 50 million around the world. If we compare this machine with a car brand, this is your long-awaited Toyota in the pressure washer sector pressure washer sector. Why are Karcher pressure washers good among all pressure washers? You'll know more about it in the texts below. Karcher pressure washers generate 50 times more powerful cleaning ability than other pressure washers. With the Karcher product, you can clean up a larger area much faster than before. Unlike others, Karcher pressure washers last long too. In contrast to other pressure washers, Karcher pressure washers can generate tremendous pressure washer, a mountain of stains, deterioration, and erosion of structural components can be eliminated with ease. Because it penetrates well beneath the surface and effortlessly gets rid of these bothersome growths. In physics, the area that produces the force determines the pressure. Smaller nozzles in their pressure washers so that the pressure can be generated forcefully. That's why Karcher pressure washers, you are likely to spend 80% less water compared to other pressure washers. So, there is no worry about water bills despite cleaning the larger area. The machine can wash swiftly and show no effect of less water on the performance. Karcher pressure washers give you a relatively easy cleaning process than the other gadgets. Its quick-connect system gives you much more convenience while cleaning distant surfaces. However, cleaning as close as possible is recommended for better results. Now that you know how desirable the Karcher pressure washers are, we can indeed show you a glimpse of their model. According to their budget and performance, we'll show you the most reliable harsher pressure washers are, we can indeed show you can use. Premium Electric Power Pressure Washer- all-rounder home toolKarcher G3000XK Gas Pressure Washer- ideal for contractors requiring extra strength. Karcher K2 Plus Electric Power Pressure Washer- ideal for contractors requiring extra strength. ones. Their products clean more quickly than the usual ones. Karcher pressure washers are always worth it with their cleaning power. There's a saying that Karcher pressure washer is a China product. The whispering is true because these products have been manufactured broadly in China since 2004. But China isn't the only place where it's made Italy and Germany have Karcher Pressure Washer companies, producing ample new products worldwide. A pressure washer can last for 10 years if maintained well and is of Karcher brand. The company usually guarantees a pressure washer can last for 10 years if maintained well and is of Karcher brand. possibilities that it'll last 10 years with accurate service. So, as the article ends, what do you think? Are Karcher pressure washers any good? Without a doubt, you can say "YES!" Can't you? Karcher is the biggest pressure washer company worldwide, and you can undoubtedly rely on their products. They make the best premium equipment that has been giving steady service for almost a decade. Hopefully, now you are no more with any confusion. Are you? You Can Also Raed: How to Bypass Toro Brake Control Module: 4 Must-Follow Steps! Learn more Kärchen isn't the only brand in the pressure washer business, but it's the biggest, with more of its bright yellow machines sold into UK homes than any rival manufacturer. The only problem is that its range can be quite confusing, with several different core models with different specs and capabilities, each appearing in several bundles with various accessories to help you clean. Do you go, for example, for the K3 Compact, the K4 Power Control or the K5 Power Control Car and Home? Over the last five years, I've tested models from across Kärcher's range, including variants of the K2, K3, K4 and K5 and a selection of home and car bundles. Here you'll find short reviews of the Kärcher pressure washers that I recommend, covering different needs and price points. If you need more detailed guidance on what to look for in a Kärcher pressure washer, you'll find it in the buying guide at the bottom of this page. Kärcher pressure washer, you'll find it in the buying guide at the bottom of this page. versatile package, but spend extra on the Car and Home Kit and you also get a rotating car brush, foam jet nozzle and T5 Surface Cleanser attachments for even better results." £180 (Price when reviewed) Kärcher K3 Power Control "The K3 Power Control sits in a sweet spot, giving you more cleaning power and features than the brand's budget models, but in a smaller, lighter and still very affordable unit. The Power Control pressure gun, Vario Power Jet spray lance and built-in detergent tank mean it's ready for anything, out of the box." £160 (Price when reviewed) We give pressure washers an extreme workout in a range of home and garden cleaning tasks. We use them to wash and clean dirty cars and mud-encrusted bikes, and to remove moss, mould and debris from patches of tarmac, stone paving, concrete and wooden decking. We also use them to remove ash and caked-on grease from a dirty barbecue and dried-on
exterior paint from a concrete slab. Throughout testing, we note how easy the pressure washer is to assemble and the features provided to store and manage the electric cable and high-pressure hose. Finally, we evaluate the spray lance and any extra features or accessories provided, to see how well they help you clean the items you want to clean. Price when reviewed: £209 | Check price at Amazon Pros: Powerful enough for most jobs, great design, wide range of accessories availableCons: Limited hose and cable managementThe K4 Power Control is a superb pressure and a 4201/hr flow, it will happily tackle areas of up to 30 square metres in an hour - a conservative estimate in my experience. Its secret weapon is its Power Control Gun and matching Vario Power spray lance. You can switch between three different pressure settings and adjust the spray in a jiffy. I found this speeded up the whole cleaning process. Whether you're washing mud off the car or trying to blast mould and algae from your patio, you get what you need without having to lug around a bunch of different tools. Of course, you can have extra tools if you want them and I've also tested the K4 with the Power Control Car and Home kit, which comes with the standard Power Control Vario and Dirt Blaster lances, plus a rotating car brush and a foam jet nozzle. If you're looking to give your motor the showroom-ready treatment, it gives you everything you need. It also throws in the T5 Surface cleaner for sweeping all the grime from your decking, patio or driveway, and this makes a real difference when you've got a lot of dirt and debris cluttering the surface. Buying the kit can double the price, however, so it might make sense to buy the bits you need individually instead.Read our full Kärcher K4 Power Control reviewKey specs: Weight: 11.5kg; Max pressure: 130 bar; Flow rate: 420l/hr; Hose length: 8m; Cable length: 5m; Motor power: 1,800W; Size (WDH): 40 x 31 x 59cm; Warranty: 2 years (5 years with free extension) Price when reviewed: E63 | Check price at AmazonPros: Compact design, effective cleaning, smart storage featuresCons: Short hose and power cable, limited pressure, single spravkarcher's latest revamp of its entry-level K2 wasner is a compact, suitcase-style unit even smaller than the Bosch EasyAguatak 100. Despite its diminutive size, the K2 Horizontal is pretty smart when it comes to storage, with space to wind the power cable and spots where the trigger gun and spray, it's incredibly straightforward, and there's a transparent pipe that sucks up snow foams and detergents if you want to apply them to your target. With a maximum of 110 bars of pressure, this isn't the most powerful pressure washer, but I found it still had enough comph to apply snow foam and blast mud and dirt from my patio and driveway. And while the single narrow spray won't be ideal for every purpose, you can always upgrade later with a variable spray wand or dirt blaster from Kärcher's extensive range. You may also be frustrated by the short 5m cable and even shorter 3m high-pressure hose, but this basic pressure washer is great value, and a real contender if you're short of storage space. Read our full Kärcher K2 Horizontal reviewKey specs: Weight: 3.5kg; Max pressure: 110 bar; Flow rate: 360l/hr; Hose length: 3m; Cable length: 5m; Motor power: 1,400W; Size (WDH): 38 x 19.7 x 24.8cm; Warranty: 2 years (5 years with free extension) Price when reviewed: £130 | Check price at AmazonPros: Variable spray and dirt blaster lances, good cleaning performance, relatively lightweightCons: Not as powerful as K4 and K5 modelsYou can save some cash by buying the K3 in its Compact version, but for your money, it would be smarter to spend a little more and grab the K4 version, using an illuminated meter for the pressure levels, making it easy to adjust the pressure level and the spray just by twisting the nozzle. You can always switch to the ferocious dirt blaster lance when you've got some tougher dirt and debris to get rid of.With a maximum pressure of 120 bar and water flow of 380l/hr, the K3 Power Control gives you a step up in power from the K2 Compact. I found it had more than enough welly to handle muddy bikes and clean surface dirt from decking or patio, while it did a fine job of removing caked-on mud from the family car. There's even a built-in detergent tank to make easy work of adding snow foam or a stone and patio cleaner. Shop around, and you can also find this model in a Premium Home bundle with the Patio Cleaner accessory and accompanying detergent. Move up the range if you need to tackle bigger, dirtier vehicles or a larger patio or driveway, but this pressure washer gives you all the fundamentals without expecting you to break the bank. Key specs: Weight: 5.4kg; Max pressure: 120 bar; Flow rate: 3801/hr; Hose length: 7m; Cable length: 5m; Motor power: 1,600W; Size (WDH): 28 x 29.7 x 67.7cm; Warranty: 2 years (5 years with free extension) Price when reviewed: £155 | Check price at AmazonPros: Compact, lightweight body, excellent performanceCons: Limited hose and cable managementSay you want the performanceCons: Limited hose and cable managementSay is a cable managementSay of the brilliant Kärcher K4 Power Control, but you can't quite stretch to its heftier price tag. Enter the K4 Classic. This simplified version has the same 130 bar max pressure and 420l/hr flow rate but does without the Power Control trigger gun and more advanced cable and hose storage features. You might not miss these features too much, though good luck getting the high-pressure hose to wind around the space provided - it springs off at the smallest opportunity. You also have to rely on plastic clips to connect the high-pressure hose at either end, which I found tricky to lock and near-impossible to unlock. However, you still get both an adjustable Vario Power spray lance and a Dirt Blaster lance for tackling stubborn grime, and you get a smaller and much lighter pressure washer. As a result, I found the K4 Classic a pleasure to use, especially if you need to carry it down steps, move around your car or get it to the end of a long driveway, where the wheels and telescopic carrying handle give you a little extra help. The K4 Classic has all the power you need for regular cleaning. It made short work of caked-on dirt, mud and hardened seagull droppings stuck to the surface of my compact SUV, not to mention moss and lichen from a garden pathway and patches of my driveway. For the toughest stuff, you can bring out the Dirt Blaster, though it needs to be used with care, as it can tear off loose stone or tarmac. Go for the Power Control if you need more features, but if you're after serious performance at a lower price, the K4 Classic is a winner.Read our full Kärcher K4 Classic reviewKey specs: Weight: 5.6kg; Max pressure: 1,800W; Size (WDH): 25.6 x 26.4cm x 45; Warranty: 2 years (5 years with free extension) Price when reviewed: £310 | Check price at AmazonPros: Awesome cleaning power, versatile spray gun and lancesCons: Big and heavy, high-pressure hose is prone to tanglingIf you need more power than the K4 offers but you're not too bothered with smart features, take a good look at the K5 Power Control. It gives you the same cleaning performance as the flagship K5 Premium Smart Control but for roughly £100 less. You also lose the wind-up hose reel - and it can be a challenge to keep the thick and springy 10m high-pressure pipe under control trigger gun and Vario Power Spray lance still allow you to adjust the intensity and pattern of its fearsome water jet, while Kärcher bundles in its Dirt Blaster lance, with a focused rotary jet that can remove thick mud, baked-on grime and even spilt paint from many surfaces. Handle it with care. You can also plug Kärcher's triangular detergent bottles directly into the specially placed spot. Switch to the low-power mixer setting, and you're good to spray snow foam or decking and patio cleaner. With or without the extra help, I found the K5 Power Control superb at cleaning filthy cars, dirty, mossy driveways and grimy paving - and the ability to vary the power quickly is a real bonus while you're working, as you can tighten the spray to clean mud and black deposits from your wheels then switch to a lighter, wider spray to rinse the bodywork. Make sure you wear some old shoes and jeans - your lower half is going to get splattered - but if you're looking for a heavy-duty cleaner, this is one of Kärcher's best. Read our full Kärcher K5 Power Control reviewKey specs: Weight: 13.7kg; Max pressure: 145 bar; Flow rate: 500l/hr; Hose length: 10m; Cable length: 5m; Motor power: 2,100W; Size (WDH): 40.2 x 30.6 x 58.8cm; Warranty: 2 years (5 years with free extension) Price when reviewed: £450 | Check price at KärcherPros: Hugely powerful and adjustable, effective smart features, integrated hose reelCons: Expensive; do you really want your phone out with all that water flying around? The K5 Premium Smart Control is a little bigger and more powerful than the K4 and comes with the bonus of a built-in, wind-up hose reel to keep its Smart Control system, comprising a new trigger gun with a built-in LCD display and Bluetooth connectivity that hooks into a smartphone app. On its own, the trigger gun allows you to turn the pressure up and down, with six levels and a boost setting for another nozzle. Connect the app, however, and you can tell the K5 what you're trying to clean, and it will set the required pressure and tell you how to adjust the lance for every stage, so as you clean the car or power-wash the driveway, you're using the right spray pattern and setting for every stage. approach can be helpful if you're not familiar with using pressure washers. And the K5 Premium Smart Control is hardly short on power, blasting even the toughest mud and moss deposits from my driveway and removing some seriously stubborn dirt from my car bodywork and wheels. In fact, you need to be careful if
you're using it on loose or more fragile surfaces at anything near its maximum settings. Buy the Home version and Kärcher also bundles the T5 Surface cleaner for a thorough clean of any steps, decking or paving in your garden. You pay a lot for the smart features, and we're not sure that using the app to control the lance is really that convenient. But, if you want the ultimate in high-tech pressure washers, nothing else even comes close.Read our full Kärcher K5 Premium Smart Control reviewKey specs: Weight: 13.9kg; Max pressure: 145 bar; Flow rate: 500l/hr; Hose length: 5m; Motor power: 2,100W; Size (WDH): 41.4 x 30.6 x 58.8cm; Warranty: 2 years (5 years with free extension)Kärcher has five main lines of washer, starting with the K2 series then running through the K3, K4 and K5 series to the high-end K7 series. The main difference as you more pressure and a higher flow-rate, although you may also get additional features such as a choice of spray lances (the long section of hard tube with the nozzle) or a more advanced high-pressure gun (the section with the handle, trigger and controls to adjust the power and spray). You might also get better storage features for the hose, spray lance and power cable. The higher the line, the more you will spend, with the K2 series starting at under £100 and the K7 series at over £400. However, you will also have more power to clean larger areas. Where the K2 is designed to clean around 20 square metres per hour, the K7 can handle up to 60. Each line also comes in several different form factors. The Compact models are smaller and lighter, but don't have the same storage features or built-in detergent holders or tanks that you will find in the more expensive Home or Power Control versions. What's more, they don't have the Power Control lance, with its LCD screen and variable power settings, or the Smart Control versions come with a price premium, so go Compact or Home if you're sticking to a tight budget. To make things slightly more complicated, the Home versions come with a revolving patio cleaner brush and wood and stone cleaner detergents, while the Car and Home versions come with a spray foam adaptor, car shampoo and polish products, plus a rotating washing brush. The more accessories you get, the pricier the package, so it's really a question of working out what you're just planning to clean a hatchback and a small-ish driveway, decking or patio, then you will be surprised what you can do with even the more affordable compact pressure washers. You can budget around £90 to £190 for something in the K2 or K3 lines. For large courtyard gardens, patios, caravans and motorhomes, go for a K5 or K7 Power Control and you will have the power you need to get the job done. The key specs are the pressure (in kW), as the more powerful washers use more energy as well as water, making them more expensive to run. Of course, you don't need to use them at maximum power all the time, reducing consumption and flow rate, but it's worth remembering how much energy and water you're using while you're cheerfully blasting away. Beyond these key specs and the bundled lances and accessories, check out the practicalities. Storage for the hose and cable might seem unimportant, but you will find that the cheaper Compact models will come with a 4m or 6m hose, while the higher-end models will have 8m or even 10m, making them easier to work with if you're washing a large vehicle or trying to reach a distant corner of your decking. 1 Return to top
