Grand Theft Auto: Vice City > General Discussions > Topic Details GTA: Vice City Not Working (FIXED) Are you having that issue when you want to play you going in to library and go to GTA-VC and want to shoot peoples heads off with a sniper and see how many stars you can accumulate, then you press play and the 2 seconds later it just stopped (not even loaded at all) and you get pissed off as to why the heck it isn't working. Hopefully this can be the fix for you!!! Now i'm sure that most of you all have/had the same issue as me and it wasn't working!!!! I just recently went through the whole process of contacting Rockstar asking what the issue can be, they went on to saying make sure everything is disabled and no programmes conflicting with Steam or Rockstar games launcher, so i did all that and it never worked!Next they said to uninstall the Rockstar games launcher and reinstall it, so i did that and again never worked! So i thought to myself why not just try to uninstall and reinstall steam again and install Vice City again, as you can guess by now the way the whole story is going it didn't BLOODY WORK!!!! hahaNow onto the fix that most of you may be experiencing!What you want to do its go into the games library and right click on Vice CityClick on properties and and go to local files and then browse (It'll take you to the main folder for Vice City)Once it is open you see the application file gta-vc, right click and go to properties.On the tabs at the top go to compatibility, once on there at the bottom press 'change settings for all users'For this part you want to tick compatibility mode and open the drop down menu to windows 98/windows me After you have done that go to settings just under that and tick the 'run in 640x480 screen resolution' once all that is done press apply and then ok.Now close all that and and open the application in the local folder.ENJOY PLAYING!!!! I hope this was useful for the people who were experiencing the same problem as me, thanks for reading. The game does not support accessories when the situation gets worse. Old updates released by Microsoft to fix mouse and keyboard errors are no longer effective. But don't worry, you can still get rid of this annoying problem by applying the methods to fix the mouse not working error in GTA Vice City on Windows 10 shared by TipsMake right after this. How to fix the error of not being able to use the mouse in GTA Vice City on Windows 10 1. Run the game in compatibility mode Some older versions of Windows can run GTA Vice City perfectly. So, try running the game in compatibility mode. That means you can run the game with Windows 8 or 7 settings. To do that, do the following: Step 1: Press the Win + E key combination and open File Explorer. Step 2: Open the folder containing the GTA Vice City installation file or access it with the path " C: Program Files Rockstar GamesGrand Theft Auto Vice City ". Step 3: Right-click on the Gta-vc.exe file and select Properties from the context menu. Step 4: In the newly opened window, click on the Compatibility tab. Step 5: In the Compatibility mode section , check the Run this program in compatibility mode for option. Step 6: Then, click to select Windows 8 or 7. Step 7: Click on Apply > OK button to save changes. Step 8: Restart your computer and open Rockstar Game Launcher. Hopefully, the GTA Vice City mouse not working error on Windows 10 has disappeared. If this method does not work, continue with the method presented below. 2. Download the original exe file on Steam A corrupted GTA Vice City gta-vc.exe file can also cause the mouse not working issue. To fix this, you need to download the original setup file and here are the steps to follow: Step 1: Download the gta-vc.exe file from the Steam version of GTA Vice City HERE . Step 2: Open the Rockstar Game Launcher , go to Settings and click on My Installed Games. Step 3: Next, click the Open button next to the View Installation folder option . Step 4: Now, right-click on the gta-vc.exe file here and select Create a shortcut. Step 5: Exit Rockstar Game Launcher and double-click on the newly created shortcut to run the game. The mouse should then work normally again in GTA Vice City on Windows 10, but there is a limitation here: you can no longer launch the game from the Rockstar Game Launcher. You need to double-click the shortcut file every time you launch the game. 3. Use a gamepad instead of a mouse If you have applied the above 2 methods but the error of not being able to use the mouse in GTA Vice City still occurs, it is better to switch to using a game controller. Joystick or game controller always brings a more convenient experience than the mouse. Follow the instructions below to set up and use a game controller to play GTA VC . Buy a wired or wireless controller from the store. . If you already have an Xbox , connect the Controller to your computer. - Open the Rockstar Game Launcher and go to Settings. - Switch the control method from Mouse + Keyboard to Joystick/Controller. At first, it may be a bit difficult because the functions in the game controller are different depending on the mouse or keyboard, but gradually you will get used to it and prefer using the Controller to the mouse much more. It is annoying to play games on PC and the mouse is not working. If you encounter this problem, apply the fix for mouse not working in GTA Vice City on Windows 10 shared in the article to fix the problem. In addition, if you encounter some lag errors when playing GTA Vice City, you can also refer to the solution here and follow the instructions. This guide will help you get Grand Theft Auto: Vice City working on Windows 10 without using any mods or extra downloads. Follow these steps to make sure the game runs properly on your Windows 10 system. Step One Step One is to view your local files on your computer. This can be accomplished after downloading and installing the game. First, right click on Grand Theft Auto: Vice City in your library. When the menu pops up, click on the last option, entitled Properties. Step Two After entering the Properties menu, a different Steam window will appear on screen. First, click the tab named Local Files. When done, click the first option that says Browse Local Files to view the installation files for Vice City. Step Three Ensure that you did it properly, as you should see a menu like this pop up in Windows File Explorer. This menu should include many folders, and a few Executables that will be used later. Step One Now that you are in the file explorer menu for Vice City, you can view the two Executable files, the first one is called gta-vc. When found, right-click it to bring up the menu, and click properties. Step Two Make sure that you right-clicked the actual name of the Executable or the Icon, because if not, a different menu will appear when you click the Properties section. When the correct menu is opened, look for the Compatibility tab. Find the checkbox labeled Run this program in compatibility mode for. When enabled, a dropdown menu below should be available to use. Find the option for Windows XP (Service Pack 3), this service pack is compatible with the format of Windows 10 and should allow use of this Executable now. Step Three You will do the same thing again, but with the other Executable in the Local Files. This Executable is called testapp. When found, right-click it to bring up the menu, and click properties. Step Four Again, make sure that you right-clicked the actual name of the Executable or the Icon, because if not, a different menu will appear when you click the Properties section. When the correct menu is opened, look for the Compatibility tab. Find the checkbox labeled Run this program in compatibility mode for. When enabled, a dropdown menu below should be available to use. Find the option for Windows XP (Service Pack 3), this service pack is compatible with the format of Windows 10 and should allow use of this Executable now. Step Five Do make sure that you hit, Apply or Ok before closing these menus, because if you do not, your changes will not be saved. After you have ensured this, close all windows and return to the Steam library interface to test compatibility. Troubleshooting For an unknown reason, the file formats of the gta-vc and testapp are somewhat different. If the game is still not launching and you see an error message after enabling the correct Service Pack for Windows XP in Compatibility Mode, reverse the names of these two Applications. Rename the gta-vc Executable to testapp and rename the testapp to gta-vc. Ensure that you give a temporary name to one of them before doing this, and ensure you do not Copy and Replace the files. Both need to be present and changing their names is one potential solution in order to get the game to launch successfully. This is only if it does not launch after enabling Compatibility Mode. Another thing to ensure is that you accept the permissions every time the game launches. A Windows message will appear to alert you about the programs permissions, which you must accept to launch the game. This is a minor issue and is the result of the Compatibility Mode program. If you had any problems viewing any of the files in the File Explorer menu, go to the Properties menu from Steam through Right-Clicking the Grand Theft Auto: Vice City option in your library, locate the Local Files tab again, and click the last option that says Verify Integrity of Game Files. Troubleshooting Issues with Mouse Input Regarding issues with the mouse input not allowing you to look by rotating the mouse and/or the clicking not working, there is a way to get around it and re-enable the mouse. This is not a perfect fix, but does work quickly and is a viable fix. When navigating menus (pause menu, home menu, brief, map, etc.), always use the ARROW KEYS and ENTER key to navigate. Instead of ARROW KEYS, you can use the MOUSE to hover over things, just remember to use the keyboard controls for selections. To troubleshoot this, if you load into the game and the mouse is not functioning, pause, and try to click on an option on the pause menu (best option is to click Resume, as then you will know when it it unfrozen), this sometimes does unlock the mouse movement. This is never a perfect fix, but can be remedied in less than a minute or so every time. (Note: Ensure that Mouse Controlled Steering is turned off and the Frame Limiter is turned on.) Fix Gameplay Issues When you use Compatibility Mode to run GTA: Vice City on Windows 10, you might notice some problems like vehicles not reversing properly or unusual vehicle speeds. You can fix these issues by turning on the Frame Limiter in the games Display Settings. With this adjustment, the game should run at its best performance using just the default settings available in the game and Windows 10, without needing to download any mods or additional software. Facing issues with mouse input in GTA Vice City on Windows 10? Go through the fixes mentioned in this guide and let us know which one works for you. GTA Vice City came out when Windows XP had its monopoly over the home operating system market back in 2003. While the game was supported without any notable issues in Windows 7 and Windows 8.1, it did have a few weird glitches on Windows 10.One of the most common glitches faced by players of GTA Vice City on Windows 10 is that the mouse is not registering any input on the main menu as well as inside the game. Theres a one-press-fix for mouse not responding the way it is supposed to at the main menu.Recommended for you! Heres How You Can Change Your Name on Fortnite!just minimize the game by pressing the Windows button on your keyboard and jump back to the game by clicking on its icon in the taskbar. The mouse should now start responding in the main menu. However, this minimization trick wont cut it for getting your mouse to work in-game.Apart from issues with mouse while playing GTA Vice City on Windows 10, players have also dropped complaints of player camera spinning continuously or the cars not reversing or the skimmer not flying at all. In-game issues like cars not reversing can be fixed by downloading the latest patch for GTA Vice City.Why Mouse Issue with GTA Vice City on Windows 10?Wondering why you might be facing mouse issue with GTA Vice City on Windows 10? The answer is simple. The games original codes for registering input may not be fully compatible with the way Windows 10 operates. The ultimate fix for this issue involves putting a .dll file in GTA Vice Citys directory. DINPUT8.DLL is the only thing needed for fixing issues associated with input on GTA Vice City. But before moving to this fix, we would suggest you to run a CPS Speed test for your mouse. It may be the root of the problem, and you will keep scratching your head even after following all other recommendationsIn this case, it is better to replace your mouse. However, if the mouse does not found as a culprit then follow other mentioned cures.Image Credit: Gamers SufficeHeres a list of issues that will be fixed after keeping DINPUT8.DLL in place:Inability to navigate the main menu by clicking on the selections available. The main menu can be navigated by using the keyboard, however. The cursor is going around just fine but it just wont click on anything.You wont be able to redefine mouse controls because there really isnt another way to head into Options apart from clicking on it.You could very well use the keyboard for redefining mouse controls but doing so wont do any good. You are vigorously moving the mouse all over your 22 mouse pad but the camera wont rotate at all.Fixes for GTA Vice City Mouse Issue on Windows 10Running in Compatibility ModeForce the game to run in compatibility mode for Windows XP Service Pack 3 because when the game came out, it was designed to run on Windows XP itself. To configure compatibility settings for GTA Vice City, right-click on gta-vc.exe file in the games main directory and head to the Compatibility tab. Under Compatibility mode, put a check before Run this program in compatibility mode for: and select Windows XP Service Pack 3 from the drop-down menu. If the mouse issue still persists, run the built incompatibility troubleshooter and try using the recommended settings.Dont forget to check this one out! Xbox One Not Turning On: Run This Checklist Now!Adding DINPUT8.DLL to GTA Vice Citys Main Directorybe very careful while downloading and adding this file to your games directory. Always download .dll files from trusted sources.Click here to download DINPUT8.DLL from my Google Drive. This .dll file has been tested and is fully compatible with GTA Vice City as well as GTA Sanandreas.Locate the downloaded file on your hard drive.Cut the file and head to GTA Vice Citys main directory (located by default at C:/>Program Files (x86)/>Rockstar Games/>GTA Vice City.Launch the game by double-clicking on gtavc.exe in the main directory.If your mouse is still not working after adding DINPUT8.DLL file to GTA Vice Citys main directory, you are probably using a broken mouse. Make sure you have downloaded all the optional updates for Windows 10 because sometimes, peripheral and device driver updates are marked optional but they are essential for smooth functioning. Do you want to fix the mouse not working problem in the GTA Vice City game on Windows 11/10? Then, you are on the right page.Well, Grand Theft Auto Vice City is an open-world game released in 2002 and developed by Rockstar North. GTA Vice City was the best-selling game of 2002. Rockstar Games sold over 17 million copies worldwide within one year of release.This iconic video game is still popular and most users install it on Windows 11/10 platforms. But, they face many problems. Mouse and audio are two major problems that most users reported. However, these problems arent new because Windows 7 and 8 users also faced them. If you download and install Vice City from official and authentic sources, you may face fewer issues. However, some users reported that the mouse and audio not working even after buying the original copy.What is the Mouse Problem in GTA Vice City?When you open the game, the mouse will not work properly i.e. it will spin or the click button will not work. Sometimes, the game may fail to detect the mouse.The click button is not working You are unable to move the mouse.The mouse stops working randomly or when you press the resume key.On the internet, you may find tons of solutions, but most of the solutions are not working. If you are a non-techie guy, it may be hard for you to solve this problem. So, here are multiple solutions that I tested and work perfectly.Lets get started.How to Fix the Mouse Not Working Problem in GTA Vice City on Windows 11/10 The list of methods is given below to solve the problem. All methods may not work for some users. But, the first solution is enough to solve the mice issue.Method 1. Install or Add DINPUT8.DLL FileAdding the DINPUT8.DLL file into the game directory can solve your issue. DirectInput (DINPUT8.DLL ) is an API for input devices like mouse and keyboards.You need to download the older version (4.8.0.400) of this DLL file version. However, the latest version of the DINPUT8.DLL file is 10.0.15063.608.Steps:Download the DINPUT8.DLL Version 4.8.0.400 file.Copy the file and paste it into the game directory.The downloaded file will be a ZIP file. Youll need to extract the DLL file from the ZIP file.Run and play the game.Thats all.Method 2. Use Only One Core of the ProcessorModern processors have multiple cores and each core reads and executes program instructions. When you launch the Vice City game, all cores work simultaneously. But, playing the game using a single core can solve your mouse problem. Thanks to Windows OS to gives an option to run the program on manually selected cores and gives an affinity option.So, you can select a single core or CPU of the processor to play the hassle-free game. Also, this solution works for 9 out of 10 users.Steps:Open and launch the Vice City Game to run it.After launching, open the task manager app by pressing Ctrl + Shift + Esc from the keyboard. The game will be minimized when you open the task manager app.Now right-click on the gta-vc.exe file from the task manager app and open the Go to details option. This will open the Details tab. Again right-click on the gta-vc.exe from the Details tab and click on the Set affinity option. Now you will see the Processor affinity windows on the screen to select the processors or cores to run gta-vc.exe. Unselect all cores by clicking on the All processors checkbox. After that select and enable the CPU 1 from the list. Click on the OK button. Click on the Vice City icon from the taskbar to restore the game and the mouse problem will be resolved.Well, one of the main disadvantages of this method is that you need to follow these steps every time you launch the game.Also Read:Fix Mouse not working in GTA San AndreasMethod 3. Use SilentPatchVCSilent Patch is a third-party tool for GTA Vice City that can solve most problems and issues. This tool supports GTA Vice City 1.0 (all versions) and GTA Vice City 1.1 (all versions, including Steam and Rockstar Games Launcher versions). Steps are given below to use SilentPatchVC.Search the Silent Patch for GTA Vice City in Google and open the GTA Forums website with the SilentPatch Scripts & Plugins title.Now click on the DOWNLOAD SilentPatchVC to download the tool. The downloaded file will be in ZIP format. Open the download ZIP file and extract the files. After that, copy and paste the files to the game directory. So, SilentPatchVC.asi ends up in the main game directory and map folders end up in data/maps.You can also directly extract the files to your VC directory. Now run the game.If the problem still occurs, download a ddraw.dll SilentPatch component together with this plugin. From the GTA Forums website page, click on the DOWNLOAD DDraw Component to download the ZIP file. After that, extract the DLL file to your game directory.Method 4. Using Run program in compatibility modeMicrosoft gives a Compatibility option in Windows OS. If the program is not running on the newer version of Windows, you can run a program in compatibility mode for older versions of Windows.The Vice City game was developed for the older versions of Windows. So, you can resolve your problem by running gta-vc.exe file in compatibility mode for Windows XP.Steps:Open the folder, where you installed the Grand Theft Auto Vice City. Generally, the default path is C:\Program Files\Rockstar Games\Grand Theft Auto Vice City.From the folder, right-click on the gta-vc.exe and open Properties from the menu.Now open the Compatibility tab and enable the checkbox for the Run this program in compatibility mode for option.Select the Windows version from the drop-down menu. You can select XP service pack 3. Click on Apply and OK to apply the changes.Open and launch the game and see the changes.Method 5. Buy and Use Original GameA Pirated copy of the game may have many issues. So, you can get rid of all problems by buying an original copy of GTA Vice City.You can buy and download it from the official Rockstar Launcher and Steam.First, you need to download Rockstar or Steam launcher. After that, sign up for the account, otherwise log in to your account if you have already registered.Buy and download the title, and play the game.Method 6. Run the Game as an AdministratorYou can solve the mouse not working problem by running GTA Vice City as Administrator. However, this solution isnt as useful as the first one, but some users claim that this method solved their problem.For this, open the folder where you install the game and right-click on the gta-vc.exe file, and select Run as administrator.Note that, click on the Yes button, if a user account control warning is prompted.Final WordsNow you know how to fix the mouse not working in GTA Vice City game on Windows 10. I mentioned five methods, but the first method is the most successful in which you need to add the DINPUT8.DLL file into the game directory.Write in the comment section if you have any problems regarding this.
