International Bank Account Numbers (IBAN) can be created and checked on this web site, with calculations performed locally using JavaScript. No personal data are sent through the web. Information about IBAN comes from ECBS and the IBAN Registry at SWIFT. The IBAN is an ISO standard, with a country-specific format that includes a 2-digit checksum and a basic bank account number. Our IBAN generator is a free service designed for testing, educational, or development purposes. It produces random International Bank Account Numbers (IBANs) that do not belong to any real accounts. For real transactions, always use a legitimate financial institution. As you navigate through your day, you might receive a call that seems legitimate. However, beware of spoofed calls that can be misleading. ### What are Phone Number Scams? Fakery is a free online tool that allows you to generate data easily, without having to add any unnecessary dependencies to your project or write any code. Simply select the data types you want to generate from the dropdown and customize them as needed. You can also copy or download the generated data.
