Home/CROSSBOWS/Crossbows Brands/Barnett Crossbows /Barnett Jackal Crossbow Full Package Check the price on Amazon All in all the Barnett Jackal is a good entry level crossbow for shooters of all ages. It has acceptable performance for hunting and target shooting and can be a great bow to learn on. It comes with all of the safety features you
would expect from a crossbow these days, and will help you stay safe while in the field. Not only that, but after buying this bow youll have it assembled and ready to shoot in less than 10 minutes. It is simple, straightforward, and a low risk investment to get you out hunting or target shooting. Every bow is designed with a purpose in mind. Some bows
are designed to be the ultimate target archery bow with accuracy as the key goal in mind at each step in the process. Other bows, or even just cool looking bows. The Barnett Jackal was designed for the very
specific purpose of getting new shooters involved in crossbow shooting and to make that first experience a good one. While this bow could certainly be a capable tool for anyone, it is a simple and low maintenance bow that is perfect for those just joining the ranks. Low risk affordable Enough power to hunt most game Designed with safety in mind Lack
of a cocking aidFairly loud Draw Weight: 150 lbsPower Stroke: 12Bow Weight: 7.7 lbsSpeed: 315 fpsKinetic Energy: 95 ft. lbs. Bolt Size: 20Axle-To-Axle: 20 UncockedOverall Size: 36Price Range: LowColor: CamoWarranty: 5 year limited lifetime Check the price on Amazon Here is one solid review showcasing the Barnett Jackal in action. Check the price on Amazon Here is one solid review showcasing the Barnett Jackal in action.
Amazon The Barnett Jackal is a capable crossbow designed to be a shooters first bow. It is a complete package that can offer an enjoyable shooting experience, while still providing an economical option. If you have never shot a crossbow before, but are entertaining the idea of getting started, this is a low risk option that still puts a solid bow in your
hands. In terms of kinetic energy produced, the Jackal is substantial at 95 ft. lbs. of energy upon impact. This sort of power for smaller animals. If you ever have plans of hunting dangerous game like grizzly bear or water buffalo, you may consider going
with a bit larger bow in that case. All the bows we review (and some we havent yet) get added to our crossbow comparison tables alongside a guide that helps you understand what features and specifications actually mean. They are a great place to get a quick overview of whats on the market, and find something that fits with your requirements. The
assembly of the Jackal isnt a huge chore, and can be accomplished in around 10 minutes. You will have to attach the quiver, cables, strings, and cable slides, all of which have photos to accompany, and help you get setup. After that, the riser of the bow simply snaps into the stock and after a few more screws to secure things, the majority of the bow is
locked in place. To finish the setup process you need to attach the foot stirrup and scope. None of the assembly is beyond the skills of even an inexperienced archer and is nothing to be afraid of. The scope that comes with the Jackal is an entry-level red dot scope. This one should have you shooting close groups at 20 yards out of the box. After that, it
will be up to you to tighten things down and get your crossbow grouping where you want it. It is an illuminated red dot, so that can be attractive to hunters planning on taking this into the field. Red dots allow you to sight with both eyes and track fast moving prey more easily than a normal scope. One feature that is a bit of a letdown with the Jackal is
the lack of a rope cocking device included. You can easily pick one up for less than $20, and it will be in your best interest to do so. Not only do rope cockers make it easier, but they create more consistency and thus make the crossbow more accurate. The quiver that attaches to this bow is a standard 3-bolt quiver you will have to attach when you get
the bow. In addition to the quiver, this crossbow package also comes with 3 20 Easton carbon bolts complete with screw-in field points. If you are a beginner, youll really appreciate how this crossbow contains everything youll need to get started. The screw-in field point feature is also beneficial for someone with hunting aspirations as many entry
level crossbows come with glued points, meaning the archer must buy brand new arrows to go hunting. The trigger on the Barnett Jackal is set at an average 3.5 pounds and breaks cleanly. Having a clean breaking trigger will help you stay accurate and consistent on your shots. The folks at Barnett didnt overlook anything in the safety department
with this crossbow. Like nearly all bows it has a anti-dry fire system that requires a bolt to be in place before firing. It also incorporated an automatic safety, which means when the string hits full draw it will automatically come on. Both of these features are great for all shooters and will make your time in the field more safe. The camo and black
model is the only color choice for the Jackal. This particular color scheme is good for hunting and looks pretty sharp in general. In terms of branding in addition to some minor branding above the trigger. All in all, this crossbow certainly wouldn't
be the last girl asked to dance. For building materials this bow features an aluminum rail that is designed to last for years to come. The aluminum is not only durable, but its lightweight contributes to the balance of the crossbow. Like most bows these days, the limbs are a composite material that are built to withstand the high pressures they are
under, and are more durable than other materials. This bow was built as a great entry level bow, but it was also built to last as well. Another aspect of the stock worth mentioning is the foregrip design. As mentioned, Barnett incorporated many basic design features to make this bow more safe. One feature in the stock is the pass through foregrip and
flared finger guard. Both of these features will make it difficult, if not impossible, to get your fingers in the way of the string upon the shot. Again, this feature is great for anyone, but especially for someone just learning the ropes. In the shooting department this bow winds up about where youd expect. It has good accuracy for the short to mid range shots, but wont excel in long distance shooting. If you are looking to hunt, or just do some target shooting, it should be adequate in most circumstances. One beef a few shooters have with this bow is the noise level. It does happen to be a bit on the loud side, a feature that isnt great for hunting. With a bow shooting 315 fps, and being a touch noisy, it
would be best to keep your hunting shots at a minimum distance if possible. Check the price on Amazon Check the price on Amazon Check the price on Amazon If youve looked over the Jackal, and think youd like to get something with a little more power, you might take a look at the Barnett Whitetail Hunter. This bow uses a heavier 160 pound draw weight to get arrows into the
340 fps range. The extra speed could certainly help out in hunting situations. The Whitetail hunter is also more customizable butt plate and picatinny rail as well. Checkout the full review. Check the price on Amazon For a shooter looking to get top notch performance, the Ghost 410 has to be on your radar. This compound crossbow
put out by Barnett can hit breakneck speeds of 410 fps. Thats almost a full 100 fps. faster than the Jackal. It also is touted to be one of the quietest and most comfortable crossbows to shoot. All of that performance does come at a price, and the 410 requires more of an investment up front. Read more in our review. Check the price on Cabelas Another
crossbow roughly the same caliber as the Jackal is the Parker Thunderhawk. This compound bow arcs arrows at a respectable 325 fps, 10 fps. faster than the Barnett bow. It also comes with a few nice accessories, like a 4 arrow quiver and 4 arrows to fill it up. The Thunderhawk may also be ideal for those hunters who do lots of hiking, as it weighs just
6.9 pounds. Take a closer look in our review. If you enjoyed this review, please take a second to share it on your favorite social media channel using the sharing tool bar, also if you have any feedback or questions, please leave a comment below! Note: Barnett Jackal was ranked as our top best affordable crossbow for over 4 years. Unfortunately, its
difficult to buy new nowadays, so we took it off our list. Still, its a very good crossbow for the money if you can find it used in good condition. For a great alternative at a similar price point, we recommend the CenterPoint Wrath 430X. Barnett Jackal Technical Specs Pros:- Best crossbow for a rank beginner looking for an affordable model- Very cheap
for such a powerful compound xbow cant beat the value- Enough kinetic energy for any legal game in the US- Package includes everything you need to get started immediately- Automated safety prevents dry firing- Military-style stock; very comfortable and looks plain coolCons:- Package does not include a rope cocking deviceSmall Game Hunting?
Deer, Elk Hunting? Moose, Bear Hunting? Moose, Bear Hunting? Also Recommended: Best Barnett Crossbow review. After ordering this model online, I waited 2 days before I received my package. Inside it I found the following parts: The
Jackal compound crossbow (stock + bow)Three 20 arrows with attachable field pointsred-dot sightDetachable quiver for your arrowsQuiver attachment platformAll the hex keys, bolts and screws required for assemblyInstruction & Safety manualWarranty card (5 year, limited)Assembling the Barnett Jackal took me around 10 minutes, which is pretty
fast considering its a compound crossbow. I followed the installation instructions and attached the guiver bracket to the bottom of the stock until it
clicked, signifying a successful attachment, which I later reinforced with the package. Now came the time to install the foot stirrup; I simply had to insert it into the opening at the front of the crossbow and then secure it with the included screws. All that was left now is attaching the red-dot sight; I placed it onto the mount and
Jackal; it is advised to do so every 5 arrows fired at the most its much easier to do than you could imagine. I personally prefer using flat nocks on my crossbow arrows, however Barnett recommends using half-moon nocks in their manual, which I can live with I placed my foot in the stirrup and cocked it it easily by hand, without using a rope. This
crossbow has 150 lbs. of draw weight, however dont let that fool you it fires 20 carbon arrows with a speed of 315 feet per second, more than enough for target practice. As soon as the Jackal is cocked, the anti-dry-firing mechanism is activated, which automatically
places the crossbow into safety-lock mode. If dead-lifting 150 pounds each time you need to cock the crossbow sounds like a chore, then I recommend getting a nylon bag filled with lots of cardboard). I was
roughly 60 yards away from the target. The trigger pull is roughly 3.5 lbs., which felt perfect to me just enough to prevent accidental firing, and just enough that you can push the trigger without struggling. The crossbow was pretty loud, but that is to be expected from such a powerful weapon. My arrow landed around 1 away from the bulls-eye, and
thats despite me not having even sighted the red-dot sight that came with the Jackal. The arrow went so deep in that I literally had to use as a target as I dont think my current penguin will survive long enough while being under fire from this
weapon. Where hunting is concerned, you can take out pretty much anything with the Barnett Jackal. On my first attempt from a 40 yard distance I took down an Elk with no trouble at all, and I expect it could be done from much, much further than that (maybe even 50+ yards), though I would not attempt it as I do not trust my aim to be as accurate as
needed at such a distance. But if you can land the arrow properly, Im sure it will kill it. The Jackal of course, what you really want to know is how much hitting power the Barnett Jackal punches with. This
crossbow will hit your target at around 315 FPS, assuming youre shooting at point blank range with 400-grain arrows. Bear in mind, youll see some drop-off of your kinetic energy (approximately 3% per 10 yards) from longer ranges, so a 30-yard shot would net you
around 82 ft. lbs. of stopping power. This is still more than enough to take down even the toughest North American game, including Cape Buffalo and grizzly bears. Use our arrow ballistics calculator for more valuable information. The Barnett Jackal SightAs I already mentioned, the package came with a red dot sight (although I did mount my scope
onto it later, hence the scope in the pictures). The name red in this case is a little misleading, as you can choose between both red and green, and pick from among five different brightness settings, depending on your preference. The sight is fairly accurate out of the box, and youll need minimal effort to zero it 5 to 10 arrows shot is all it will take. I
recommend that you always carry a spare battery with you, in case the one that comes with the sight were to run out of juice in the field not fun at all! See our detailed guide on how to sight-in your crossbowThe Arrows In The BoxMy Barnett Jackal came with 3x Easton, 20 inch carbon arrows. Included with the arrows were three attachable field
points, which I was happy about some crossbows, particularly the cheaper models, come with arrows which have glued-in field points, so if you want to hunt, just buy a set of 3 high quality broad-heads from Barnett. As for the
arrows, they are very durable definitely more so than the arrows with the Arrow Precision Inferno Fury. They can take a beating and will last you a long time, unless you are constantly shooting from short ranges such as 10 yards or less. Barnett recommends using either 18 or 20 arrows with the Jackal, though I prefer sticking with the 20
inchers as they seem to fit just right onto the rail of the crossbow. Im sure the 18 will work just fine too, otherwise Barnett wouldnt be recommending them; its just a matter of preference. You can obviously store the three arrows in the quiver, which you can easily detach when marching through the woods. You can also learn more about crossbow.
arrows and take a look at our broadhead recommendationsDurability & ConstructionJust a few quick words here. I really enjoyed the stock on the Barnett Jackal; it holds EXACTLY like a regular military rifle. The grooves in the grip make it exceptionally comfortable to hold, kind of like those old gaming joysticks on gaming consoles. Recoil is minimal
despite the high FPS, though it is a bit loud, as already mentioned. As for durability Barnett would never release a crossbow made of anything less than perfect materials, so Im not even going to bore you with the details. In short: its as durable as a crossbow can get. What you should be worrying about is the durability of your target, and whether it
will be able to handle the devastating force that the Jackal will unleash upon it What Crossbow Case Fits The Barnett Jackal? This is a fairly small crossbow, so it will fit into most cases. As far as recommendations go, a very cheap and affordable one is the Barnett Case (Model 17083) it will fit the Jackal perfectly even with the sight on. A comparably
good but somewhat cheaper alternative is the Allen Company case. Barnett Jackal Crossbow Review SummaryThis is the finest low budget compound crossbow you can buy. It also happens to be the model that we would recommend to absolutely any beginner, regardless of whether they want to hunt or shoot just for fun. You should not take this to
mean that this is a crossbow for beginners only, however; its just as good a choice for intermediate and advanced crossbow-shooters, basically for everyone looking for great power, accuracy, and safety, at an affordable price. Make sure to check Amazon.com price Crossbow if youre interested. 4 Looking for great power, accuracy, and safety, at an affordable price.
Barnett crossbows?Or are you just looking for some reviews or Barnett crossbows for sale?If your answer to either of the questions is yes, then you are at the right place. Youre about to find out everything you need to know about the Barnett crossbow brand. History Overview Of Barnett CrossbowsIt all began in 1958 when Bernard Barnett made his
first crossbow, and this was the beginning of making a job out of his favourite hobby. Soon enough, in 1962 the Barnett Crossbow Company was founded in his garage in the United Kingdom. By the year of 2003, Barnett was one of the leading crossbow companies, and today its headquarters are in Tarpon Springs, Florida in the United States of
America. What Makes Barnett Crossbows UniqueThey were first to patent a shoot-through foot stirrup, a folding foot stirrup, a 
ChoiceTheir main goal is to keep their customers happy and in order to achieve this goal, they are constantly improving their products. Today you can find Barnett crossbows in all kind of shapes and designs from step through riser, reverse draw, compound to their most famous Barnett recurve crossbows. Designed By Hunters For HuntersBarnett
Crossbow Company is an industry leader in both crossbow design and manufacture and to this day they have sold over one million crossbows. Their products are designed by hunters for hunters and they give you a good choice of lightweight, adjustable and very powerful crossbow OfferLike I mentioned earlier, you can choose from
a variety of different crossbow models and some of their most popular ones are Barnett Recruit, Jackal, Quad 400, Wildcat, Whitetail Hunter, Raptor, Predator, Ghost, Penetrator, Youth and Vengeance Crossbow. Top 11 Barnett Recruit Crossbow Reviews Barnett Recruit Recru
weight is 140 lbs and it had kinetic energy of 91,9 ft lbs. It weighs 6,4 lbs. It weighs 6,4 lbs. Its dimensions are 33 x 14 x 8 inches. One great thing about this Barnett crossbow will be your new best friend for quite some time. Barnett Recruit crossbow
package includes 432 scope, rope cocking device, lightweight quiver, two 20-inch Headhunter arrows, lube wax and a compatible crank cocking device. Reviews of this Barnett Crossbow are mainly positive people praise its power, accuracy and reliability. They also like that its size and weight are great for carrying around in the woods. Also, because
of its lightweight its perfect for people of smaller size or younger hunters. On the other hand, some people complained about its string because it cracked after a couple of shots. The problem with the string could be solved by waxing it regularly, its
recommended to do it after every 10 shots. Another problem could be its scope and eye relief (its too long) so some people ended up replacing it. After comparing all of the Barnett crossbow reviews, this Barnett recruit crossbow is an excellent choice for any hunter because it fast, precise, easy to assemble and it comes for a great price. You can be
sure that your every hunting trip in the woods will be enjoyable. Barnett Jackal Crossbow is lightweight, relatively compact, and durable, which is why a lot of people are choosing this brilliantly made military-style Barnett crossbow. Specifications of this bow consist of great velocity of 315 FPS, including 3 Barnett
crossbow arrows, easy and smooth 3.5 lb trigger pull. Barnett Jackal crossbow specs are that it shoots at 315 FPS with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 12-inch power stroke and length of 32.5 kg) with 12-inch power stroke and length of 32.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pound (68 kg) draw weight. Weights 7.7 pounds (3.5 kg) with 150-pounds (3.
and width 26.5 with included Weaver rail system to attach any scopes, sites, or Barnett crossbow parts. Climate controlled storage and wax so it doesnt damage. When loading a crossbow always make sure odd colored arrow fletching is down.
Read users manual thoroughly and reference safety videos before using it if you are new to this, after all this is not a toy. Barnett Jackal crossbow is perfect for small hunting, deer or elk hunting, and even grizzly bear and cape buffalo hunting, and even grizzly bear and cape buffalo hunting. With its lightweight, accuracy and design you are in for a great experience. Bottom line, the Jackal crossbow is perfect for small hunting, and even grizzly bear and cape buffalo hunting.
price is very much affordable and it matches the quality and looks of some high priced counterparts. You can always turn to their staff, they will politely answer all your questions. After reading all of the Jackal reviews, it can be concluded that whether you are a beginner or a skilled outdoors hunter, thisl crossbow will be a brilliant addition to your
hunting weapons. Barnett Quad 400 Crossbow. This particular crossbow is excellent for small hunting, deer or elk hunting, bear or moose hunting, and target shooting and here is why. It features draw weight of 150 LBS (68 kg), power
stroke of 15.25 inches, velocity 345 FPS, arrow length of 22 inches with length 37.5 inches and weight of 9 pounds (4 kg). This means its perfect for every hunter, even beginners. It has great speed and amazing weight where you will be able to hunt for all day. Barnett Quad 400 crossbow is very accurate and can shoot your target from 50 yards,
knocking them right of their feet. With its Barnett crossbow scope that allows you to choose from green to red dot, you will get a fine look while aiming at your target and after that, you just have to pull the trigger. And of course, it comes with a detachable lightweight quiver that hooks below the limbs
allowing for a relatively quick reload. The quiver can hold up to a maximum of 4 Barnett crossbow bolts and arrows. Also, it comes with high-density gas assistant cock, or in other words, it allows for a lightweight composite that doesnt put the crossbows strength to compromise. Despite its amazing power and speed, there is a difficulty in loading you
cant easily cock the bolts and arrows into place without some assistance, even though it comes with integrated cocking device attachment (reducing the number of reloading times). So for beginners, have someone experienced with you to help you cock it. With only 9 lbs to it, it may seem like it is pretty lightweight, but it is not. For the injured hunter
this is going to be a heavier crossbow, but the crossbow speed and accuracy eliminates this problem, particularly when youre out there hunting and thinking of taking a break, you can place it in a case and youre crossbow will not be damaged by rain or
tree branches. Highly durable and with strong power, you can find various Barnett crossbow parts for sale at a great price with guaranteed quality. Barnett Wildcat C5 crossbow brilliant velocity comes ready to shoot right out of the box with a Barnett
crossbow bolt, quick-detach quiver and a premium red dot sight with varying dot intensity. One of the best selling crossbows of all time, it features a lightweight composite GAM stock, thumbhole grip, vented quad limbs high energy wheels, and the all-new crosswire string and cable system. It is also crank-compatible with an optional attachment
allowing for easy installation while maintaining a sleek, low profile design. This back to the roots design allows you to feel excitement while hunting for anything. Barnett Wildcat crossbow is perfectly made for beginners and professional hunters, it will truly meet your
expectations and more. Specifications for this Barnett crossbow are velocity of 320 FPS, draw weight of 150 pounds (68 kg) with kinetic energy featuring 97 foot-pounds, power stroke of 13 inches with dimensions of 35.25 inches length and 26.75 inches width and physical weight of 8.5 pounds (3.9 kg). For anyone just trying
out Barnett Wildcat C5 crossbow for the first time or if youre long in the hunting game, this bow is going to be perfect. With its performance it guarantees the accuracy, speed, and comfortable design. The downside to this Barnett suggests that it should last up to
100 shots, it all depends on how well you maintain it. If you do this often you wont have a problem with it. It is also advised to purchase Barnett crossbow bolts are not correctly instructed in the assembly, so if you see that bolt is too short or looks wrong, stop and double check it. If that
doesn't work, have someone experienced to show you. As for the good sides, Barnett arrows are designed so that they could be placed on the crossbow in only one way. This ensures ease of use and extra safety. Also due to large stock thumbhole, you get better maneuvering of this Barnett Wildcat C5 crossbow. You can find this Barnett crossbow for
 sale at Amazon or at Barnett homepage and their local dealer, also comes at an affordable price and you will love it. Barnett Raptor CrossbowThe Barnett Raptor Crossbow can shoot up to the speed of 350 FPS (frames per second) and it has a power stroke of 12.5. It weighs 6,4 lbs. Its
dimensions are 33 x 8 x 14 inches. A great thing is that it is shipped to you mostly assembled, so you are more or less ready to go to your first hunting trip at once! This Barnett Raptor crossbow package includes 432 scope, rope cocking device, lightweight quiver, two 20 headhunter arrows and lube wax. Together with it you get some additional
features bristle brush retainer, finger safety reminders and a pass through fore grip. This Barnett crossbow is an ideal choice for experienced, adult shooters regardless of their shape and size. Another big plus is that it comes at a great price, so nearly everyone can afford it. All of peoples reviews are extremely positive they are loving this Barnett
crossbow for its accuracy, speed, that its easy to put it together and that it works exactly as it has been advertised. If you decide to purchase this crossbow will surely make your every hunting season quite rememberable. Barnett Predator CrossbowThis
particular Barnett Predator crossbow comes with these specifications 430 FPS velocity, includes premium 1.5-532 illuminated Barnett crossbow scope, Rope Cocking Device, Side Mount Quiver, Two 22 Barnett crossbow arrows (headhunters), and Lube wax. With a draw weight: 187 lbs (84kg), kinetic energy of 156 Ft. Lbs, power stroke 16.25 inches
 with a normal weight of 7.6 lbs ( 3.4 kg) and dimensions: 37.125 length x 19.75 width with Axle to Axle 17.8 inches. Also featuring patented Carbonlite step-through riser with string dampeners for stealth like shooting. CNC Machined Aluminum flight track for smooth, quiet and accurate shots. Equipped with Nock Sensor and Anti Dry Fire Trigger
System to eliminate dry-fires and keep you safe, along with finger guards & finger safety reminders. It is advised to wax strings every 10 shots, so they dont have to wax them until 100 shot. Barnett Predator crossbow is one of the fastest on the market and for
every hunter this will be a dream come true. Not only its fast, but accurate as well, so when you aim and take your shoot your target shooting, deer or elk hunting, bear or moose hunting, and small hunting. It has a 5-year
warranty that covers the stock, trigger mechanism and limb assembly, but does not cover string failures or failures due to misuse. Comes at an affordable price. You can find this Barnett crossbow for sale at Amazon or Barnett homepage or their dealers. Barnett Ghost Crossbow for sale at Amazon or Barnett homepage or their dealers. Barnett Ghost Crossbow for sale at Amazon or Barnett homepage or their dealers.

sports and outdoors and archery categories. People are overall very happy with this Barnett crossbow. What they like the most is that it is very easy to set it up, very comfortable, deadly accurate at long distance, it has a smooth trigger pull and nice anti-dry fire. Problems you could potentially have are with the scope, but that can be easily solved.
What you should do is to invest some time in mounting the scope correctly. You should also align the crosshairs to form a vertical and horizontal line at the same time ensuring that the bow is level as well. If you do that, you should not experience any problems and you are good to go! If you decide for Barnett Ghost crossbow, be certain that you will
make a good choice. This bow is an excellent choice for beginners because it is incredibly easy to use and assemble it. It shoots smoothly, fast and accurately. It also comes for a very good price so be sure that with this Barnett crossbows quality you will get your moneys worth. Barnett Penetrator CrossbowAs for compound crossbow, the Barnett
Penetrator crossbow is one of the best ones. With 350 FPS, power stroke of 12.5 inches, 8.6 pounds (4 kg) of normal weight, draw weight of 175 pounds (79 kg), length 37 and width 18.25, 103 LBS Kinetic energy and TriggerTech trigger type be sure that this is a great choice. It is the most accurate of all Barnett compound crossbows. Another
amazing thing is that it comes with a five-year warranty against any kind of defects in material or workmanship. With it you will be able to make a humane killshot without losing your balance. Not only that they are offering the best quality for adults, but also Barnett youth crossbows. That means your child will be able to get to know the world of
hunting or target shooting with their youth bows. People are quite satisfied with this model. It is very powerful, easy to shoot with, fast and accurate. Another great thing is that it is a bit heavier and louder than other models. Some
also complained about its scope. Overall, it works great, but it lacks the typical range finding recticle that todays modern crossbows have. Luckily, this problem can easily be solved by adding a new scope to make this Barnett Penetrator crossbows have. Luckily, this problem can easily be solved by adding a new scope to make this Barnett Penetrator crossbows have.
bow will be shipped to your doorstep. For reasonable amount of money you will get a fast, accurate and a deadly crossbow model out there? Look no further because the Barnett Vengeance Crossbow is the right choice for you. It can
reach the speed of 365 FPS. Its draw weight is 140 lbs, axle to axle length is 14.75. With it 34 x 14 x 8 inch dimensions and only 7 pounds be sure that you have one of the most powerful crossbows in your friend you should
just search Barnett Vengeance assembly and from there onwards it shouldnt be a problem. People are highly recommending because for its price, you will get a very powerful, fast and accurate crossbow. Once you put it together it will shoot flawlessly so be sure that you will make some nice kills with it. With its quad limbs, oversized cams and
reverse draw it shoots lightning fast bolts. Apart from complaining about setting the bow up, its rather loud for some peoples liking and they say that the scope could be somewhat better. Some also had small problems with shooting or loading it. This Barnett Crossbow comes at a very affordable price for it you will get a powerful, fast, comfortable and
accurate crossbow. You should though be cautious when ordering this crossbow, since some people noticed quite some flaws with the model and some even received it damaged. Nevertheless, I am positive that if something like that should happen, the Barnett customer service will be happy to help and solve all of your problems. Barnett Youth
CrossbowBarnett Youth Crossbow is different than the rest of the models from the Barnett crossbow brand. It is modeled on the Hunter and in one crossbow you can find juncture of lightweight materials, ergonomic design, durable construction and with the speed of 140 FPS it will give you the best results during your hunting career. The Barnett
Youth crossbow package includes premium red dot scope, rope cocking device and 3 arrow quiver. Some additional accessories that you get are an adjustable butt pad finger reminders and a pass through fore grip composite flight track. This Barnett crossbow has a draw weight of 17 lbs, power stroke of 30 lbs and it weighs 12,5 pounds. Its
dimensions are 34.2 x 18.1 x 8 inches. People are mostly very positive about this model. They love it for its lightweight, it is very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it, and it is also very easy to use and shoot with it.
with it. If you decide to purchase this bow, be sure that you will fall in love with it and that it will be your best friend on your hunting trips for many years to come! Barnett Whitetail Hunter II CrossbowBarnett crossbow that features velocity of 350 FPS with a draw weight of 150 LBS (68 kg), kinetic energy of 103 ft pounds. Overall weight is 6.4
arrows and lube wax. This is a great bow for either beginner or professional hunters. It is lightweight, very fast and accurate, your hunting season will be extravagant with this Barnett crossbow. The downside to it is scope and dry-fire
protection. You can always adjust your scope with another model of Barnett crossbow scopes so after that you wont have a problem with it. But with dry-fire is a little different, it seems that you wont have to always carry a block to decock it, otherwise you wont be able to take the bolt from the string without shooting it first. That is dangerous even for
with it. For the Barnett brand that would be Barnett crossbow case, arrows, scope, bolts, string, quiver and cocking device. It is very important to know that if some of them wear out because then you will have to ask for the Barnett crossbow replacement parts. If you want to find out more you can take a look at my post about most common universal
crossbow replacement parts and accessories. Barnett Crossbow Manual Another very important thing is to take care of your crossbow once you get it. You should know how to properly use it, clean and store it. All the necessary information about that can be found on their online manual. Conclusion: What Is The Best Crossbow Made By Barnett? After
reviewing and comparing all of the Barnett crossbow reviews, we can see that this is one very good crossbow brand that offers you a variety of different models of high quality. My recommendation would be Barnett Youth or Barnett Raptor crossbows on the market
and you can also find my top 5 of the cheapest crossbows if youre looking for great quality weapons, but at a more affordable price. We may earn a small commission when you make a purchase through our links. At no additional cost to you by the way! Read our Affiliate Disclosure policy to learn more. Today well be reviewing a classic from Barnett;
the Barnett Jackal crossbow. Its a cheap crossbow for less than $300, features a premium red dot sight, and shoots arrows at 315 feet per second with a premium red dot sight thats powerful and accurate enough to take out any animal at 40-yard distances that mig
cross your path during a hunting trip! With each Barnett Jackal crossbow package youll get the following: Barnett Jackal Riser, Red Dot Sight, Quick Detach Quiver, 3x 20 Headhunter Arrows with Field Tips and an Owners Manual. Barnett Jackal Product Review Weighing only 7 pounds the Barnett Jackal crossbow is pretty
lightweight. It doesnt feature any special or fancy accessories. Due to it being a beginner or entry-level crossbow its not that compact. Measuring a total of 32.5 inches wide uncocked and 20.5 inches wide uncocked.
adjustable or foldable in my opinion. It does shoulder nice and feels very comfortable to hold because of the ergonomic grips. Barnett speed-rated the Jackal crossbow at 315 feet per second with a draw weight of 150 pounds. This crossbow features high energy cams that produce that extra little power to put it over the 300 feet per second. For
example, the Barnett Wildcat or Blackcat are traditional recurve crossbows with a draw weight of 165 pounds but only reaches speeds of 265 feet per second. Barnett Jackal crossbow package. These arrows have a total weight of around 410 grains and that includes a 100-grain field tip, meaning
the shafts weigh around 310 grains. Barnett features moon nocks on the Headhunter arrows.NOTE: When loading the Barnett Jackal to be a cheap entry-level crossbow. Therefore this crossbow does not feature a great scope. Barnett
mounted a red dot sight on the Barnett Jackal. A red dot sight is the most basic optic you can get. It does not offer any magnification. The red dot sight that is mounted on the Barnett Jackal features 3 aiming points for 20, 30, and 40 yards distances. TIP: Bring some spare batteries with you. If youre out hunting and the red dot sight is out of power,
your hunting trip is over. If you want to shoot at farther distances or have magnification then I highly recommend buying a different scope. Make sure its a lightweight scope, as the Picatinny rail is secured to the stock of crossbow with only one Torx screw. Id recommend this TRUGLO hunting scope. It is a minimal, compact crossbow scope for less
than $50.Unfortunately, Barnett does not include a rope cocking device with the Barnett Jackals draw weight is only 75 pounds with a rope-cocker. Its best to use Barnetts rope cocking device, but if you prefer a
different one then of course use the one you like. Barnett features an anti-dry fire metal injection molded trigger. It isnt the latest trigger from Barnett does not ship the Jackal pre-assembled, youll have to assemble it yourself. If you have
assembled a crossbow before, then it wont be too hard to assemble the Barnett Jackal crossbow. Sighting in was not needed as the first couple of shots were dead-center. This might be different for you, so make sure to use the Barnett Jackal out
to the range for some thorough testing. My first time handling this crossbow was a bit surprising. The ergonomic grip and stock feel comfortable and shoulders, I brought a rope-cocker with me. This saved me a lot of time and energy. While loading the Barnett Jackal, make sure the odd colored vane
is pointing down. It should be the yellow-colored vane. After properly loading the arrow, the anti-dry fire will disengage and youll only have to sight in the red dot sight. The red dot sight was already correctly zeroed in on 20, 30, and 40 yards distances. I also managed to
get pretty tight groups at 40 yards. I was a bit surprised actually, 1-inch groups with a red dot sight at 40 yards. With some practice, anybody should be able to get the same results. The chronograph gave results of 316, 315, and 317 feet per
second! Right on the money! While shooting the crossbow, I noticed it generated guite a lot of noise and vibrations. This doesnt matter a lot if youre just using it for target practice, but if youre out on a hunt this can be a game-changer. Installing a set of string or limb dampeners can be guite effective in reducing the noise and vibrations that the
Barnett Jackal produces. As I already mentioned in the #cocking section, the Barnett Jackal does not come with a rope cocking device. Its best to buy one separately on Amazon. A rope cocking device will also prevent you from getting string wax on your hands. Barnett recommends to only use 20 or 22-inch arrows. Barnett includes Headhunter arrows
with the Barnett Jackal crossbow package. The arrows only have field tips and you need to separately buy broadheads. You can either pick the standard Headhunter arrows from Barnett, as theyre good and pretty cheap also. If youre looking to get even cheaper arrows for the Barnett Jackal, then check out this pack of 12 carbon crossbow bolts from
TY Archery. To actually go out for a hunt, youll need some broadheads with your arrows. Rage offers pretty cheap broadheads have a cutting diameter of 2 inches, this is enough for the biggest game you can hunt. Barnett features a big warning in the owners manual; Climate controlled storage and waxing the string every ten shots
is highly recommended. Always try to store a crossbow case. This will provide optimal protection for your crossbow, you don't want to spend a lot of money on a crossbow case. An inexpensive case that fits this crossbow is the Southland Archery
Supply Padded Soft Crossbow Case with a sling. As I already mentioned in the #Range Test section, the Barnett Jackal is quite a noisy crossbow. Installing a set of Bowjax limb dampeners to guiet down the crossbow is highly recommended. It also helps in getting tighter groups (more accurate shots). Our Rating of the Barnett Jackal Bryan Taylor The
Barnett Jackal compound crossbow is often on the list of recommendations for affordable, reliable crossbows. Most of its users speak highly of it and give it excellent ratings. Lets look at some of the features that inspire this positive feedback. Specifications: Velocity: 315 fpsDraw Weight: 150 lbsLength: 35.5Weight: 7.7 lbsPower Stroke: 12The Barnett
Jackal offers much more than one would expect from its low price point. Its sleek design and lightweight build make it easy to carry around. The Jackal compound crossbow Three 20 arrows with attachable field points Red-dot sight Quiver for your arrows Quiver attachment platform All the hex keys, bolts and screws required for assembly Instruction &
Safety manualWarranty card (5 year, limited)Check On AmazonCheck on CabelasEven though it may not be among the most powerful crossbows in the market, it still holds its own by offering sufficient power to take down most games. It has a velocity of about 315fps and delivers arrows at about 90 FPKE. This would mean that even under less-than-
ideal weather conditions, it would still strike its target with force above the required 75 FPKE. It is, therefore, good enough to hunt all sizes of game up to about 40 yards, but if you have great precision, youll find that you can exceed 50-60 yards. This accuracy is not the norm for crossbows
within their price range. One of the main contributors to this accuracy is the Picatinny rail guide system that keeps your arrows firmly on track. It has a highly detailed instruction manual for setting up, and the assembly should take at most 20 minutes. Compound crossbows are generally a bit more complex to assemble the Recurves. The Jackals
crossbow build is simply superb, starting from the quad split style limbs are not only visually appealing, but the design allows for a slightly faster acceleration rate thanks to a significant reduction in air resistance. This really helps
with the overall speed and is a major plus for this bow. Its design is lightweight and therefore ensures there will be no arm fatigue during your hunting expedition, and you can keep going for hours on end. However, the retainer isnt of the best quality and will likely need to be replaced in about a year if you use the weapon frequently. Considering the
price of the bow, this is not so surprising. The Barnett Jackal has energy wheels strategically positioned on the edges of the limbs to make for an easy draw. The stock is inspired by a military-style rifle and gives the bow a classy look. The stock is inspired by a military-style rifle and gives the bow a classy look. The stock is inspired by a military-style rifle and gives the bow a classy look. The stock is inspired by a military-style rifle and gives the bow a classy look.
a camouflage design that makes it easy for the hunter to blend in the wild. Its riser is made of machined aluminum one of the best materials available to ensure high quality and durability while keeping the weight to a minimum. Its shoulder rest is not the worst in the industry but lacks a little width that would otherwise make it very comfortable. The
three bolts that come on the package are relatively good quality and weigh a total of 400 grains. Their field points are not glued in: meaning they can be removed if you wish to get a different broadhead. They do not easily break on impact, and you will only need to buy more to have enough options while you are right in the middle of hunting. At a total
weight of only 7.7 lbs, the Barrnet Jackal can be used by virtually anyone, including younger hunters in training. This crossbow has no front heaviness, as the weight is evenly distributed, making it comfortable to use. The only downside to its numerous great features is that it does not come with a rope-cocking aid. You will have to keep drawing the
150lbs of draw weight every time until you make a point to get one, so we highly recommend it (check the addon section). Like any other compound crossbow, the Barnett Jackal is pretty loud when firing arrows. It does not include any noise suppression devices in the packaging, so purchasing a dampening system is highly recommended to enable you
to get some actual hunting done. Otherwise, you might scare away every target you set your eyes on and go back home empty-handed. The included scope is pre-sighted, offering accuracy for up to 20 yards, but it allows for double that distance when adjusted. Sighting it is not a challenge, and in about five shots or so, it should be dead zero and ready
to go. After the first sighting, the scope holds zero for a long time and does not require any adjustments. Even though it is referred to as a red-dot scope, the scope has green and red lights, which feature five brightness settings. These can easily be adjusted to suit the lighting and weather conditions. However, remember that this might drain the
battery pretty fast, and it is always a good idea to have backup batteries close at hand. Unless you must have a reticle scope, this one comes with most of the relevant features and should last you for quite a reasonable duration. The positioning of the foregrip serves to secure your hold on the bow, reducing the chances of accidental firing. It also keeps
your fingers out of harms way by ensuring that they are nowhere near the strings path as you draw on it to release an arrow. The trigger system offers about 3.5 lbs of resistance, being firm enough to ensure that you do not pull on it by mistake and allowing for a sufficiently smooth experience to give you efficient performance every time. Most
importantly, it features a dry-fire inhibitor, a tool that is standard for most models and that will ensure your weapon for as long as it is in use. The majority of features on this crossbow indicate that it was built to last. Most of its parts will last you well past the 5-year warranty period for as long as you take good care of it. Always
remember to wax and condition the string for optimal performance and to ensure that they will last you a good while. Without such diligent care, the strings will soon start separating and will not give you their full service of approximately 800 arrows. Lightweight and compactDecent fps & penetration (most game) Energy wheels enhance
performanceNo rope cocking device includedReally loudBuy On AmazonBuy on CabelasWhile shopping for a dampening system, it is highly recommended that you go for one that does not come with one. This would help to cut down the 150lbs draw
weight to only 75lbs making the bow even easier to use. We recommend using Carbon Express PileDriver for the type of bolts. Please note that for the TenPoint dampening system, you will have to modify it slightly. If youre not comfortable doing this, buy Broadband Dampeners. From the above review, it is clear that the Barnett Jackal Crossbow offers
much more than one would expect from its low price point. Its sleek design and lightweight build make it easy to carry around and deliver enough power to take down all games. Apart from being a bit loud and not including a rope cocking device, which are problems that can be addressed easily, this gear is remarkable and surely deserves all the
glowing tributes it has been getting.
