

I'm not a robot

Screen mirroring to a TCL Google TV allows you to display the screen of your mobile device or computer directly on your TV. This is especially useful for showing photos, videos, or even apps that do not support casting. The process varies depending on the device you are using.###ARTICLE To browse the internet on your TCL Android or Smart TV, you need to download a web browser that can handle the task efficiently. Google Chrome is one of the most popular and widely used browsers in the world due to its compatibility and security features. Although your TCL Smart TV may not have Google Chrome pre-installed, there are ways to install it on your device.To start with, you need certain applications before installing Google Chrome on your TCL TV. These applications will help you check your TV's CPU architecture and install the browser. You can search for AIDA64 on the Google Play Store and select it for installation. Once installed, open the AIDA64 application and navigate to the CPU section. In this section, look for the Supported ABIs heading and note down the text adjacent to it.Next, you need to download the APK of Google Chrome from APKMirror on your laptop or phone. You can search for the latest version of the browser and click on the download button. Make sure to select the architecture that matches your TCL TV's CPU architecture, which you noted down earlier. Do not download the Bundle version.Once you have downloaded the correct APK file, copy it to a USB Flash Drive and connect this storage media to the TV through the USB port. You will need to search for Solid File Explorer on your TCL TV through the Play Store and download it. To enable installation from unknown sources, go to Device Preferences > Security & Restrictions > Unknown Sources.Return to the home screen by pressing the Home button and open the File Explorer App. Navigate to your storage media name and locate the Google Chrome APK that you downloaded earlier. Click on the APK and select ok to install it. Wait for the application to install, and once it's done, you can start using the browser.However, if you want an enhanced experience, you can follow a few additional steps. Traditionally, the Google Chrome app is developed for mobile (Android), so the app on your TV will load websites in the mobile phone format. To force desktop sites on all sites you visit, type chrome://flags in the URL bar of your browser and change the option from default to enable.To cast media to your TCL Smart TV from your computer or mobile device, you can use the casting option in Google Chrome. First, connect both devices to the same network. Next, open up the option on your TV where you can download apps. On most TVs, this is called the App Store. In the search box, you will need to search for an app that will evaluate the system infrastructure of your TV. This app is called AIDA64.After downloading and opening this app, navigate to the CPU section. It will list several different details of your TV, but you will be looking for Supported ABIs. Note what this description is for later.You will need a laptop or desktop computer and a flash drive in order to proceed. On your laptop or computer, go to apkmirror.com and search for Google Chrome. Find the Google Chrome download that matches the architecture you previously wrote down and save it to your flash drive.After this is complete, insert the flash drive into your TCL Smart TV. Now you will need to go back to the App Store and download FX File Explorer. After downloading the Explorer, open it and access the Media Card. Now find your Google Chrome downloaded file. Click on this file and Google Chrome will begin installation after following the prompts.You can now exit out of the FX File Explorer and go to the main screen of your TV. From the main screen, find the search bar at the top where you can search the TV. Enter Google Chrome, or just Chrome and the browser will appear for you to select.From here, you should be able to use the Google Browser just as you would anywhere else, but only on your TCL Smart TV now! If your TV has Chromecast built-in to their lineup of great features they bring you.Wanting to watch movies or listen to music? There is an app for that on prebuilt Android TV systems. The Google Play Store has tons of apps for TV, but when it comes to web browsers, you will only find a handful of them. This is because the browsers aren't perfectly optimized for use with the remote's D-pad and navigating via the browser can also be a headache.However, you can simply download a few browsers that are available right off the Play Store. One of the best web browsers out there is Mozilla Firefox, but you will have to get the app by sideloading it. JioPages is another great option, as it functions perfectly and is free to use. Although it's designed for the Indian market, you can still make use of a VPN to get it installed on your Android TV.Because it's an Android TV OS, you have the option of sideloading apps to your TV very easily. Simply download the app to your USB drive from a PC and then connect it to your TV. You can also make use of cloud storage apps by uploading the APK file to the cloud drive and then downloading it to your Android TV.There are four ways you can install the web browser of your choice on your TV: Downloading from the Play Store, Sideload via USB drive, Using a cloud drive to download APKs, and Using ADB to install apps on Android TV. You can find more information about sideloading apps to your Android TV by following this detailed guide.Google Chrome is also available for Android TV, but you won't be able to use it directly on your TCL Roku TV. However, there's a way to install it using some basic instructions. You'll need to open up the option on your TV where you can download apps and search for an app that will evaluate the system infrastructure of your TV.AIDA64 is one such app, and after downloading and opening it, you can navigate to the CPU section and note what this description is for later. Next, you'll need a laptop or desktop computer and a flash drive to proceed with the installation process.You can download Google Chrome from apkmirror.com and save it to your flash drive, then insert it into your TCL Smart TV. From there, you can use a file explorer app to find the downloaded file and initiate the installation process.After completing the installation, you'll be able to access Google Chrome on your TCL Smart TV by searching for it in the search bar at the top of the screen. And if your TV has Chromecast built-in, you can also cast media from your computer or mobile device using Google Chrome.If you want to browse the web on your TCL TV, don't worry, there's an easy way to do it. First, let's determine which OS is in your TCL TV. The three common OSes used by TCL TVs are Android TV, Google TV, and Roku TV.#### Which TCL TV OS has a Web Browser?Only two types of OS have web browsers - Android TVs & Google TVs. Android TVs and Google TVs support many internet browsers such as Puffin TV Browser and TV Bro. However, popular browser like Google Chrome or Microsoft Edge are still waiting for an official release.#### Why does the Roku TV not support a Web Browser?Roku TVs do not have web browsers built-in. To use one on your TCL Roku TV, you can connect it to your laptop by using either HDMI cable or Airplay feature.#### How to Access Internet Browsers on Your TCL TVFirstly, you need to download your preferred browser from the app store and then install it.1. Download internet browsers like Puffin TV Browser, BrowseHere Browser, JioPages Browser, TV Bro Browser for Google TVs and Android TVs.2. TCL Roku TVs can be used with a laptop. 3. Airplay is another good option to watch videos on your TV using your iPhone or iPad.#### How to Install Google Chrome on Your TCL TVTo install Google Chrome on your TCL TV, download the APK file onto a USB flash drive and then install it using FX File Manager.To get Google Chrome on your TCL Smart TV, don't worry about technical expertise, you just need a little patience! When she's not teaching you how to install software, you can find her reading cookbooks. TCL Smart TVs are top-of-the-line devices for streaming and entertainment. Each one has its own set of features that make it unique. Google Chrome is also a fantastic web browser that many use on their computers and mobile devices. So, the question remains: does your TCL TV have Google Chrome? You can't install Google Chrome directly on a TCL Roku TV but there's a workaround that we'll discuss later.You can also use casting from another device to display Google Chrome on the TV. This is super convenient! Since Google Chrome isn't pre-installed, you'll need to download it using some easy steps that we've figured out. It might take you into some areas of your TV that you're not familiar with, but don't worry, it's a breeze.Here's how to get Google Chrome on your TCL Smart TV: First, go to the app store and search for an app called AIDA64. This app helps evaluate your TV's system infrastructure. Note down the Supported ABIs description you'll need this later. Next, grab a laptop or desktop and a flash drive. Go to apkmirror.com and find the Google Chrome download that matches the architecture you noted earlier. Save it to your flash drive.Now, insert the flash drive into your TCL Smart TV and go back to the app store. Download FX File Explorer and open it. Access the Media Card section and find your Google Chrome file. Click on it, and the installation will begin after following some prompts.After this, you can exit out of the FX File Explorer and head back to the main screen of your TV. Search for Google Chrome or just Chrome, and voila! You'll see the browser on your TCL Smart TV!But that's not all if your TCL TV has Chromecast built-in, you can also cast media from your computer or mobile device to the TV using Google Chrome. Just make sure both devices are connected to the internet.If you don't use Google Chrome, there are other casting apps available for download on your TV's app store. And if you want Chrome specifically, you can install it following these steps.please check system updates on your tcl tv and the app store for the latest information and new features
